STRATEGY · 2027–2029

AI & PropTech Strategy 2027–2029

Where 3 PIN stands against the best AI-native brokerages and proptech products, and what to build, in what order, with the money, the business effect and the agent time for every initiative.

Written 14 Oct 2026 from a review of the best AI-native brokerages and proptech products in the world and in India, the Chennai market, and the platform 3 PIN already runs. It replaces the earlier roadmap, which listed ideas without saying what each one changes. Every initiative here states **where we are, what we introduce, why, what happens the day after, how to build it on what exists, the money, the business effect, the agent time, the risks, and the number that proves it worked**. Figures marked *assumption* (A) are to be replaced with the Finance console's own numbers; the model in section 8 shows how, with a downside, a base and a stretch case. Sections 12–15 add **Eåsy by 3 PIN** (the personal AI staff for every user), the bets that lead the sector, the next chain of business — joint ventures, construction and redevelopment — with the one-year case, the international watchlist with the ideas untouched in Chennai, and (section 16) an audit of the current system: what is missing, where the gaps are, and the improvement list to ship first. Sections 17–27 turn the plan into a business: positioning and the name system, the customer segments, the fee card, unit economics, where to grow first, people, partners, competitors and moats, the risk register, the 90-day plan and funding.

Sections 17–27 turn the plan into a business: **one brand story and name system** (17), **who the customers are and what each gets** (18), **the fee card** (19), **unit economics and client lifetime value** (20), **where and through which channels to grow first** (21), **the people plan and incentives** (22), **partners** (23), **competitors' likely moves and the moats** (24), the **risk register** (25), the **90-day plan** from today to Wave 1 (26) and the **funding view** (27).

1. The thesis in one page

The brokerage of 2027 is an AI-native company with agents in it, not an agency that bought AI tools. The proof is already public:

- SERHANT.'s S.MPLE platform has completed 54,000+ requests for 2,000+ agents, returned ~28,000 hours of admin work, and agents who joined and adopted it raised their commission income **144 % year on year** against their previous firm (company-reported). S.MPLE 2.0 (September 2026) adds **Dot**, an "AI chief of staff" that reads the agent's calendar, email and CRM and *starts work before being asked*, coordinating 70+ specialist agents (CMAs, listing presentations, campaigns, transaction coordination, compliance, follow-up).
- Compass agents report **15–20 hours a week** given back by an AI assistant that lives inside their pipeline and executes admin work. Zillow's **AI mode** (March 2026) lets buyers search by describing the home and takes real steps for them (tours, agent contact).
- In India, NoBroker crossed **₹1,000 crore** revenue, runs rent collection and property management at 8–10 % of rent (5–8 % on offer plans), and launched ConvoZen.AI for voice conversations; MagicBricks' READPRO AI CRM is on **85,000+ broker licences**; Housing.com prices **10 million** properties live. Landeed verifies ownership and documents with AI across states. In July 2026 WhatsApp began rolling out **Meta Business Agent** to Indian businesses — an AI that answers, qualifies and books in every Indian language — so a fast reply on chat is becoming the minimum, not the edge.

- The economics are known: a lead answered within 5 minutes converts **8–9 times better** than one answered in an hour; sub-90-second WhatsApp replies lift site-visit conversion to **25–30 %** against 5–10 %; Indian brokers who follow a structured, AI-assisted system close **4–6 %** of leads, the best **8–10 %**, against an average of 1–3 % (industry benchmarks, not audited).

3 PIN's position is unusual for a Chennai agency: the data pipeline that most brokerages lack is **already built** — chat intake, a real pipeline with milestone dates, a matching engine used in three consoles, a shoot-to-post media tracker with per-outlet cuts, a ledger per deal. What is missing is the layer that *acts* on it, the channels that *reach* buyers and sellers at scale, the media formats buyers now expect, and the recurring revenue lines that investors value more highly than commission income.

The growth case rests on three multipliers, each measured in the CRM and Finance.

Multiplier	From → to (base case, A)	What moves it
Conversion — deals per lead	2 % → 5 % (× 2.5)	Answer in a minute on every channel, a deal score, follow-up that never lapses, briefed visits
Volume — leads and listings	70 → 160 leads a month (× 2.3); 8 → 20 listings	Sourcing engine, distribution, the content engine, referrals
Value per deal — ticket × sides, plus services	₹1.0 Cr × 1.2 sides → ₹1.1 Cr × 1.5 sides (× 1.4)	Exclusive listings, loans, services, management

Multiplied, they take monthly brokerage from about ₹1.7 L to about ₹13 L, and total revenue with loans, services and management to about ₹17 L, by October 2028 — about ten times today's brokerage-only figure in the base case, five in the downside case and seventeen at benchmark-level performance (section 8). The base case adds two sales agents and the operations people the management line needs (section 22), so revenue per sales agent rises almost eight times. Every input is an assumption until Finance replaces it.

2. What the leaders do, October 2026

Who	What they built	Why it matters for 3 PIN
SERHANT. — S.MPLE 2.0 / Dot	An agentic layer over the agent's whole business: proactive daily work, 70+ agents, CMAs, listing decks, marketing campaigns, transaction coordination, compliance, follow-up. 144 % GCI uplift; ~28,000 hours returned. Built for fast iteration (Vercel), exactly 3 PIN's stack	The model to copy for the back office: a chief of staff that *starts* work, with a person approving. 3 PIN's Daily task and AI queue are the seed
Compass — AI Assistant / Compass One	Assistant inside the CRM: daily briefings, likely-to-sell flags, record updates, follow-up drafts, transaction management; a client portal for every stage. 15–20 h/week saved	Briefings and a buyer/seller portal ("My 3 PIN") are cheap for us because the data already exists
Zillow — AI mode, Showcase	Conversational search ("3BHK near a metro, east facing, under 1.5 Cr"), guided next steps, immersive listings (3D, floor plans, staging)	Buyers will expect to *talk* to inventory. Our match engine + inventory can answer on WhatsApp today
NoBroker	Owner-direct model, rent collection, property management (8 % of rent, or 10 % with a rent guarantee, at standard rates; 5 % and 8 % on offer plans), interiors, loans, packers; ConvoZen voice AI; ₹1,000 cr revenue	Shows the recurring-revenue lines a brokerage can add; also the competitor that removes brokers unless we add value they cannot
MagicBricks READPRO, Housing.com AVM, 99acres	AI CRM to 85k brokers; 10 M live valuations; AI recommendations from budget, commute, behaviour	Portals are turning into platforms. We must syndicate *and* own the relationship with a price opinion portals cannot give for Chennai micro-markets
Landeed / Zapkey	AI reading of sale deeds, EC, patta, mutation, survey maps; registration data; legal opinions; loan-readiness	A "3 PIN Verified" badge is buildable in months, not years
Giraffe360, Apply Design, Gaussian splatting (Insta360 X6, Matterport, Realtor.com)	One visit → HDR photos, LiDAR floor plan, 3D tour, video, staging, property site. Photoreal walkthroughs from a phone or 360 camera; staging of 10,000 homes a month by one app	The shoot can produce ten assets instead of two, at the same cost
AI voice agents in India (Tamil-capable)	Qualify, score, book the visit, WhatsApp the confirmation; response time 4 h → under 60 s; 3× qualification rate; after-hours leads convert	TailorTalk covers chat; the phone channel is open
SmartZip / Offrs / Likely.AI	Predict who sells in 6–12 months from 250+ signals; ~72 % accuracy; automated outreach	The same idea works on *our own* event data plus Chennai public records
Generative-engine optimisation	67 % of surveyed buyers used ChatGPT/Gemini/AI Overviews before contacting an agent; real estate ranks last in AI visibility (0.14 % AI Overview trigger rate)	An open field: locality guides and verified facts in Tamil and English get us *cited*
SM REITs / fractional ownership	₹2,300 cr (2021) → ~₹9,800 cr (2026); SEBI-regulated; ₹10 lakh tickets; 8–10 % yields (platform-reported)	Not a business to build; a product to distribute to our investor buyers
Meta Business Agent on WhatsApp (India, July 2026)	An AI agent any business can switch on: answers, recommends from the catalogue, books appointments, qualifies leads, sends a morning summary of missed chats; all Indian languages	A free "answer in seconds" for every competing broker. Our edge has to be what the agent *knows* (verified stock, the price desk, matched buyers), not that it replies
Zillow app inside ChatGPT (Oct 2025)	Live listings, maps and prices inside ChatGPT conversations, handing off to tours and loans	The template for "Ask Eåsy" as a ChatGPT app (D5)

Chennai, 2026 (trackers differ; quote the source with the number). Knight Frank: **13,871 homes sold in January–September 2026**, up 2 % on 2025 and the best nine months since 2018, but **Q3 down to 4,673** units; launches down 7 %; weighted average price **₹7,715/sq ft, +5.9 %**; ₹50 L–1 Cr is **47 %** of sales; homes above ₹1 Cr rose 26 % to **42 %** of sales (34 % a year earlier) while homes below ₹50 L fell 46 %; 4.4 quarters to sell the unsold stock, the second-lowest of the eight big cities. JLL counts H1

2026 apartment sales up 27 % with prices up 13 %. Asking prices run from ~₹4,000/sq ft on the outer corridors to ₹20,000+ in Adyar/Besant Nagar. The **Poonamallee–Porur–Vadapalani metro** (14.6 km, Phase 2) opened on 11 Oct 2026. Meta cost per qualified lead ₹300–1,500 in metros.

3. Where 3 PIN stands — honest scorecard

Status is taken from the Process Atlas (the live platform at commit `b48bfaa`).

Area	Today at 3 PIN	Best in class	Verdict
Sourcing sellers	Owners come to us (WhatsApp/Instagram/website chat), the AI re-tags confident sellers, a card is made automatically. Nothing finds owners *before* they decide	Predictive seller scoring, owner outreach, co-broking networks, portal scraping	**Gap — biggest growth lever**
Onboarding & listing	Listing type, documents checklist, brochure v1/v2, mapping by hand; owner approval gate not enforced	WhatsApp-native intake, document AI, instant price opinion, e-signed exclusive agreement	**Partly**
Showcasing	Photos, video, drone, floor plan, tour as checklist; per-outlet cuts and V/O; brochure by pipeline	3D/splat tours, virtual staging, AI narration in Tamil, avatar presenters, property microsites	**Behind on formats, ahead on process**
Distribution	Instagram/FB/YouTube posts confirmed with URL; 99acres and website by hand	Portal feeds, own GEO-optimised site, WhatsApp channels, matched-buyer push	**Gap**
Attraction & influence	Owner's content, week plan pasted into Posting; attribution not measured	Founder-led content engine with measured leads per post; creator collabs; newsletter	**Partly**
Lead matching	One engine across CRM, dashboard and board; vetoes; "Properties for this buyer"	Behavioural signals, conversational search, auto-outreach on new stock	**On par / ahead**
Speed-to-lead & conversion	TailorTalk replies on chat; calls not captured; follow-ups rule-based; AI stage placement	<60 s on every channel incl. voice, 24×7; call → notes; deal score; next best action	**Gap on phone, par on chat**
Site visits & buyer experience	Visits with calendar invitations to agents; feedback captured on return	Visit pack to the buyer, virtual-first tours, buyer portal, offer assistant	**Partly**
Transaction & closing	Finance deal, invoices, GST, token	AI transaction coordinator, e-sign, KYC, registration tracking	**Gap**
After-sale & recurring revenue	None (sold = removed from matches)	Rentals, management, loans, interiors, annual value reports, referrals	**Gap — biggest revenue lever**
Agent back office	Daily task, digests at 08:00/09:00/21:30, mentions	Chief-of-staff AI that drafts, books, updates and reports; voice commands	**Gap**
Data & intelligence	Rich event data held, mostly unread by any AI (signals log, milestone dates, undo history, price edits)	Fact store, price desk, attribution, self-auditing AI	**Gap, cheap to close**

4. The operating model to build: "3 PIN Autopilot"

Three layers, each built on something that exists:

1. **Fact layer** — a nightly fact store (one compressed document per topic: leads, properties, deals, posts, visits) plus a Chennai price desk and demand map. Every AI reads facts from here, never raw collections (quota, speed, consistency). Exposed to Claude/ChatGPT through an MCP server, so the owner can ask any question about the business in plain Tamil or English.
2. **Agent layer** — supervised specialist agents (sourcing, seller intake, media, outreach, follow-up, transaction, finance) run by one coordinator, **Eåsy by 3 PIN**, the personal AI staff every user gets (section 12). Eåsy starts work proactively (as Dot does) and puts anything consequential into **one approval queue** the owner clears from the phone. The CRM's existing AI queue, suggestions and 7-day undo are the seed.
3. **Channel layer** — WhatsApp (TailorTalk, Flows, channels), Instagram, a phone number answered by an AI voice agent in Tamil and English, the website and **Ask Eåsy** (the buyer-facing edition of Eåsy) on WhatsApp and as a ChatGPT app, and portal feeds. Every channel writes to the same lead, the same card, the same fact store.

Rules that never change: a person approves Won, listings going public, agreements, prices and first contact with a new person; every AI action is logged and undoable; nothing reads customer data for a purpose it was not collected for; AI-made visuals are labelled.

5. The plan by area

Effort: **S** weeks · **M** 1–3 months · **L** a quarter or more. Money is per year unless said. "Agent time" is hours per agent per week.

A. Sourcing — find the seller before they decide

Current status. Listings depend on owners contacting us. The Sellers view shows who is waiting for a card; there is no "where found" field, no shortlist stage, no outbound sourcing. Growth in listings equals growth in inbound chat volume, which costs ad money.

What we introduce.

#	Initiative	Effort	What it is
A1	**Likely-to-list engine**	M	A score per known owner and past contact from our own events (rent-out enquiries 11+ months old, tenants whose lease ends, buyers who bought 7–10 years ago, sellers who paused, owners whose property we marketed for rent) plus public Chennai signals (new registrations by locality from registration data, guideline-value revisions, aging rental listings on portals, new society handovers, NRI-owned flats). Transparent weights; recalibrated quarterly
A2	**Owner outreach autopilot**	M	For every high-score owner, Eåsy drafts a personal WhatsApp or call script in Tamil/English with a *locality price note* ("flats like yours in Anna Nagar sold at ₹14–18k/sq ft this quarter"); the agent approves and sends; replies flow into the normal pipeline. TRAI-compliant: no cold AI calls, opt-in first
A3	**Co-broking and portal feed**	S	Daily ingest from co-broking networks (CoClose has 1,500+ Chennai listings; Brokers Blok) and owner-direct portals into a "sourcing inbox"; AI de-duplicates against inventory, scores fit against open buyer demand, and proposes who to call
A4	**Referral engine**	S	After every visit, deal and rental, a WhatsApp Flow asks for a referral with a one-tap share card; referrers get a tracked thank-you (and a reward where lawful). Every referral is attributed
A5	**Demand-led sourcing targets**	M	The demand–supply gap engine (open buyer requirements vs stock by locality, budget and configuration) produces a weekly "find 3 × 2BHK in Velachery under 90 L" list for agents, with the exact buyers waiting

Why. A brokerage's growth ceiling is listings, not buyers. Predictive sourcing is now a mature category abroad (72 % accuracy at 6–12 months); nobody in Chennai does it with owned data. Our demand data tells us *which* properties to find, which makes every outreach credible ("I have four buyers for this").

What happens the day after. Each agent's Daily task gains a "Sourcing" section: five owners to contact with the script ready and the buyers waiting named. The Sellers view gets a *Prospect* column before *Waiting for a card*. The owner sees a weekly "listings pipeline" number for the first time.

How to build. A1 is a scoring module over the fact store (section K) plus two public-data fetchers; A2 reuses the follow-up drafts and WhatsApp templates; A3 is an ingest job plus the existing duplicate detection and match engine; A4 is a WhatsApp Flow and a `referredBy` field already implied by the lead model; A5 is a report over existing match vetoes and requirements.

Financial impact (assumption-based, section 8 model). +25–40 % listings in year one at near-zero ad cost; each exclusive listing is worth two sides of brokerage. With 131 properties today, +40 listings a year at a 30 % sell-through and ₹1 Cr average ticket at 1 % per side ≈ **₹24 L** additional brokerage a year if both sides are ours (₹12 L if only the seller side), before referrals.

Business impact. Listings become a controlled input instead of luck; exclusive share rises because we arrive first with buyers in hand; the brand becomes "the agency that calls you with a buyer".

Agent time. +2 h/week of calls, but the research and scripting (today ~4 h/week when done at all) disappears.

Risks. DPDP: only contact people with a lawful basis (existing relationship, consent, public business listing); keep a do-not-contact flag everywhere. Accuracy: start with top-decile scores only; measure list rate per 100 contacts.

Success. Listings per month; share of listings that are exclusive; outreach-to-listing rate ≥ 5 % by month 6.

B. Onboarding & listing — the seller autopilot

Current status. Listing type, documents checklist (non-blocking), brochure v1/v2 and mapping exist. Details are typed by staff; the owner's approval gate is not enforced; there is no agreement workflow, no price opinion, no instant listing presentation.

What we introduce.

#	Initiative	Effort	What it is
B1	**WhatsApp intake**	M	TailorTalk asks the 30-field checklist conversationally, in Tamil or English, with photos and documents as attachments; fields land on the card; staff only review
B2	**Document AI and "3 PIN Verified"**	M	EC, patta/chitta, sale deed, approved plan and tax receipts are read by AI (Landeed-style, or Landeed's API); ownership chain, encumbrances and mismatches are flagged; a verified badge appears on the listing, brochure and site. Documents still never block marketing
B3	**Chennai price desk**	M	A price opinion per property from guideline value (floor), our own comparables (closed deals, visit feedback, price edits), portal asks by micro-locality, and the demand map. Shown as a range with reasons; refreshed monthly; exported as a one-page "Price note"
B4	**Instant listing presentation**	S	A personalised PDF and 60-second video in the owner's language: price note, buyers already matched (count and profiles), the marketing plan (shoot date, outlets, brochure), the verified badge, the agreement terms
B5	**Agreement and approval gate**	S	Exclusive/Collab agreements e-signed (Leegality/Digio); the owner's one-tap approval before any agreement is drafted; a shoot for Exclusive/Collab can only be booked after sign + check (Normal skips it, as the owner's process says)
B6	**Missing-paper nudges**	S	Weekly WhatsApp nudges to the seller for Missing/Applied documents, with how-to links (e.g. EC online); surfaced in Daily task

Why. Sellers choose the agency that shows them a price, buyers and a plan in the first conversation. Verification is the single biggest trust gap in Indian resale and nobody local badges it. Exclusive listings double revenue per property and remove co-broking leakage.

Day after. A seller who messages at 9 pm has answered the checklist by 9:20, received a price note and presentation by 9:25, and seen that six buyers match. In the morning the owner sees one approval request. Staff typing drops to review.

How to build. B1 extends TailorTalk's prompt and the card's field model; B2 wraps a document-reading model behind the finance-upload style Drive guard; B3 is a module over the fact store, the area model and the change log; B4 is the brochure pipeline with a new template plus Sarvam TTS; B5 is e-sign API + the listing-type field; B6 reuses the follow-up digest.

Financial impact. Exclusive share from (assume) 20 % to 50 % of listings; each conversion adds a second side (~₹1 L per ₹1 Cr deal). Verification can be a paid service to owners (₹2,000–5,000) or a differentiator. Price desk reduces overpriced, unsellable listings (fewer wasted shoots at ₹3–5k each).

Business impact. Faster time-to-market (owner yes → live in 7 days instead of 2–3 weeks); fewer disputes at registration; a brand promise ("every 3 PIN listing is verified and fairly priced").

Agent time. −3 h/week typing and chasing per agent; the owner's approval takes 2 minutes a day.

Risks. Document AI must say *"needs a lawyer"* rather than guess; legal opinions stay with a panel advocate. Price notes are opinions, never valuations for lending.

Success. Owner-yes → live median days; exclusive share; documents complete at listing (%); seller NPS after onboarding.

C. Showcasing — media that sells, from one visit

Current status. Photos, video, drone, floor plan and virtual tour are tracked as a brief; one shooter per visit; editors cut per outlet with V/O; brochure PDF. No 3D tour, no staging, no Tamil narration at scale, no property microsite. Buyers increasingly expect to walk through before visiting.

What we introduce.

#	Initiative	Effort	What it is
C1	**One-visit media kit**	M	Standard capture: phone photos + 360 camera (Insta360 X6 class, ~₹50k) + LiDAR phone scan. From one visit: HDR photos, 2D floor plan with measurements, a **Gaussian-splat walkthrough** (photoreal, phone-viewable), a 30-s vertical reel, a 60-s YouTube cut, 10 stills for carousels. The brief on the card becomes a kit checklist
C2	**Virtual staging and clean-up**	S	Vacant or cluttered rooms staged in minutes (apps stage 10,000+ homes a month at ~₹200/image); day-to-dusk exteriors; labelled "virtually staged"
C3	**Tamil-first narration and avatar**	S	A consented clone of the owner's voice (Sarvam Bulbul, 11 Indian languages, Tanglish-aware) narrates every reel in Tamil and English from the AI-written script; an avatar presenter for listings nobody can front; captions auto-generated
C4	**AI copy per buyer persona**	S	Listing text, reel scripts, carousel captions and brochure copy written from the facts (never invented), in the voice of the locality and the likely buyer (family, investor, NRI); A/B tested by leads per post
C5	**Property microsite ("Showcase")**	M	One page per listing: splat tour, floor plan, photos, map and commute, verified badge, price note, WhatsApp button; shareable link used in every outreach; indexable for GEO
C6	**Editor copilot**	S	Rough-cut assembly from the shot list (music, order, titles), so the editor finishes rather than starts; capacity forecast from the edit timings already recorded

Why. Reels are the highest-engagement format on Instagram (3.7 % average; 2.7 times carousels); 52 % of agents say social leads beat portal leads (US agent surveys; we measure our own through E3). Immersive listings are now native on the big portals; a buyer who has walked a splat tour arrives at the site visit pre-sold. Media is also the cheapest way to earn exclusives ("you cannot get this anywhere else").

Day after. A shoot produces ten assets instead of two; the editor's queue shows rough cuts waiting for a decision rather than raw footage; every listing has a link to send; the Tamil reel goes out the same day as the English one.

How to build. C1 adds kit items to `MEDIA_KEYS` and a splat processing step (hosted service or local GPU); C2/C3/C4 are API calls from the board (staging, Sarvam, LLM) with human approval; C5 is a static page generator fed from the inventory and the posting tracker; C6 sits in the Editor view.

Financial impact. Media cost per listing roughly flat (₹3–5k) for 5× the assets; listings with immersive media sell faster and at closer to ask (industry claims vary; we measure). Staging ₹200/image against a visit saved.

Business impact. Instagram reach per listing three to five times today's (target, to be measured); exclusive wins; fewer wasted visits (buyer disqualifies online).

Agent time. Shooter: +20 min per visit for the 360 pass. Editor: −30–40 % per cut. Owner: fewer "what should we post" decisions; the plan writes itself (Section E).

Risks. Staged images must be labelled (RERA/consumer protection); voice cloning needs written consent and a stored sample; splat hosting costs scale with listings (budget ₹200–500 per tour).

Success. Assets per shoot; leads per listing in the first 7 days; visit-to-offer rate for listings with a tour vs without.

D. Distribution — be where every buyer looks

Current status. Posts go to Instagram/Facebook/YouTube by hand and are confirmed with URLs; 99acres and the website are updated by hand; no feeds; no own search site; nothing targets AI search.

What we introduce.

#	Initiative	Effort	What it is
D1	**Portal syndication**	M	One listing record pushed to 99acres, MagicBricks, Housing.com and the website with the right photos and copy per portal; status and price changes sync; leads from portals flow into the CRM with source attribution
D2	**Own search site with GEO**	M	A fast listing site: conversational search ("3BHK near Guindy metro under 1.2 Cr, east facing"), locality guides in Tamil and English (prices, schools, commute, floods, upcoming infra), FAQs, agent pages, verified facts — written to be *cited* by ChatGPT, Gemini and AI Overviews (real estate's AI visibility is 0.14 %; the field is empty)
D3	**WhatsApp distribution**	S	WhatsApp Channel for new listings; broadcast lists by locality/budget (opt-in); WhatsApp Flows for "book a visit", "get the price note", "share a referral"; catalog messages with the microsite link
D4	**Matched-buyer push**	S	A new or re-priced listing triggers a message to every matched buyer (through the match engine's existing ranking) with the microsite and a one-tap visit slot; agents approve the batch
D5	**Ask Eåsy** (buyer edition)	S → M	The inventory and locality knowledge exposed first as a WhatsApp assistant (Wave 3), then as a ChatGPT app on the Zillow model (Wave 5): a buyer describes what they want and gets our stock, a price note and a visit booking, 24×7

Why. A listing seen by many more qualified people sells faster at a better price; distribution is also the owner's reason to sign exclusive. Buyers now start in AI answers (67 % in a 2026 US survey), and Google's AI Mode has answered in Tamil since October 2025; Chennai content in Tamil that answers "is Perumbakkam flood-prone?" will be quoted for years.

Day after. Posting "Confirm posted" becomes "Published to 4 portals, 1 channel, 38 matched buyers"; the CRM shows leads by portal and by post; the site brings organic leads with zero ad cost.

How to build. D1 uses portal APIs/feeds (where available) with a mapping layer from the inventory fields; D2 is a static site built from the fact store (same build pattern as the documentation pack) with structured data; D3/D4 reuse TailorTalk templates and the match engine; D5 wraps the match engine and price desk in an assistant endpoint (the MCP server from K).

Financial impact. Portal and social leads at ₹0–300 each against ₹300–1,500 paid; +30–50 % lead volume without ad spend in year one (assumption); exclusive conversions as above.

Business impact. Faster sales, more exclusives, lower cost per lead; a web asset that compounds.

Agent time. −2 h/week of portal posting and copy-paste.

Risks. Portal rules on duplicates and photos; keep one source of truth (inventory) so prices never diverge; WhatsApp templates must stay utility-grade to avoid blocks.

Success. Leads by source; cost per lead; organic share of leads; days on market.

E. Attraction and influence — the content engine, Chennai edition

Current status. The owner fronts the content and pastes a weekly plan; posts are tracked and URLs saved; attribution (which post brought which lead) is not measured; the plan is made from memory.

What we introduce.

#	Initiative	Effort	What it is
E1	**Content plan from inventory**	S	Åsy proposes next week's plan from what is new, what has a tour, what has buyers waiting, what is priced to move, and what performed last month; the owner edits and pastes (the existing Paste week plan accepts it)
E2	**Series and formats**	S	"Chennai Street Price" (one street a week, with the price desk), "Verified or not" (document stories), "Before visit / after visit", buyer education in Tamil; 2 reels/day across outlets; carousels for saves; Stories daily
E3	**Attribution**	S	Post live times joined to leads (codes in chats, link clicks with tags, "where did you see us" in the AI intake) → leads and visits per post, best slots, best formats
E4	**Creator and community collabs**	S	Tamil lifestyle/finance creators and society groups; co-branded tours; the collab outlet on the board finally has a channel
E5	**Newsletter and WhatsApp monthly**	S	A monthly Chennai market letter (price desk data, new stock, sold stories) to every contact who opted in; the same content feeds GEO

Why. The Serhant playbook is a *volume* content machine attached to a brokerage; 38 % of agents' new clients come from social (US agent survey); a measured engine beats an inspired one. Our media pipeline already produces the assets.

Day after. Monday's plan arrives drafted; every post has a number next to it a week later; the editor knows which formats are worth the hours.

Financial impact. Content leads at near-zero marginal cost; ad spend redirected to retargeting warm audiences.

Business impact. Brand = "the Chennai agency that knows prices and tells the truth"; inbound sellers rise with reach.

Agent time. Owner −2 h/week planning; editor focus on winning formats.

Risks. Burnout and sameness — the plan must rotate formats; claims in content must come from the fact store.

Success. Leads per post; followers who become leads; sellers who cite content as source.

F. Lead matching and conversion — never lose a lead to time

Current status. TailorTalk answers chat within seconds; phone calls are not captured; follow-ups are rule-based reminders; the AI places leads forward-only; matching is strong; there is no deal score, no next-best-action, no coaching from real conversations.

What we introduce.

#	Initiative	Effort	What it is
F1	**AI voice agent on the main number**	M	Answers in Tamil/English 24×7, qualifies (budget, locality, BHK, timeline, self-use/investment), offers matching stock, books a visit into the agent's calendar, sends the WhatsApp pack; hands hot leads to a human within 60 s in office hours. Inbound and opted-in callbacks only (TRAI)
F2	**Every call becomes a note**	M	Agent calls through a cloud number (Exotel/Ozonetel class), recorded with consent; Tamil + English transcription; the lead AI writes the note, follow-up, interest, stage and visit — the agent confirms
F3	**Deal score and next best action**	M	Per lead: probability and value (milestone speed, match confidence, objections, response times, budget vs stock) and the one action that moves it; the Follow-ups queue is ordered by expected value, not by date alone
F4	**Going-cold and revival**	S	Drafted nudges when a lead cools; parked buyers revived automatically when matching stock arrives or a price drops (links to D4)
F5	**Pre-visit brief and objection library**	S	One page before every visit: who, what they said, their vetoes, the seller's floor, comparable sales, likely objections and tested replies, learned from transcripts and visit feedback
F6	**Coaching flywheel**	M	Weekly, per agent: response times, what worked in Tamil conversations, role-play on real objections

Why. Response time is the single largest conversion lever (8–9× within 5 minutes; 3× qualification with voice agents in India). The phone is still where Chennai buyers and sellers close. A lead worked by score, not by memory, is how the best teams reach 8–10 % against 1–3 %.

Day after. No missed call after hours; every call has a note in two minutes; the follow-up queue starts with the ₹ at stake; agents walk into visits briefed.

How to build. F1/F2 are a telephony integration feeding the existing lead AI (`api/_lead-automation.js`) and calendar sync; F3 is a scoring module on the fact store with the existing attention rules; F4 extends the automation and the match engine; F5 assembles the lead case file; F6 is a weekly job over transcripts and `reached` dates.

Financial impact (model). Lead-to-deal from (assume) 2 % to 5 % on today's ~70 leads a month = +2 deals a month ≈ **₹2.5 L/month** brokerage at ₹1 Cr and 1.2 sides; after-hours leads from near-zero to a measurable share.

Business impact. Fewer agents needed per deal; consistent client experience; a defensible "we answer in 60 seconds" promise.

Agent time. −5 h/week on note-taking and chasing cold leads; +2 h on visits with hot ones.

Risks. Recording consent and DPDP (duties bind from 13 May 2027); outbound promotional calls only from a registered 140-series number and never to DND-blocked numbers; the voice agent must hand over gracefully; scoring must stay explainable and never hide a lead.

Success. Median first-response time (all channels); lead-to-visit and visit-to-deal rates; revenue per lead.

G. Site visits and the buyer experience

Current status. Visits are booked by staff with calendar invitations to agents; the buyer gets what the agent sends; feedback is captured after; no buyer-facing portal; no virtual-first step.

What we introduce.

#	Initiative	Effort	What it is
G1	**One-command booking**	S	"Book Shiva at the Anna Nagar 3BHK, 2 pm tomorrow" (voice or text) → lead and property found, free agent picked by rule, one-tap confirm, WhatsApp confirmation to the buyer with map pin, parking, agent and what to bring; reminders; feedback asked by AI afterwards
G2	**Virtual-first visits**	S	Before a physical visit, the splat tour and price note go out; buyers rank 3 options; physical visits are booked only for the shortlist — the "Showcase" from C5
G3	**My 3 PIN buyer portal**	M	A WhatsApp-first (and web) space per buyer: shortlist, visits, documents requested, loan pre-approval status, offers made, next steps — the Compass One idea at our scale
G4	**Offer and negotiation assistant**	S	For the agent: comparable sales, the seller's recorded floor, the buyer's budget signals, suggested anchors and a draft offer message; for the buyer: a transparent cost sheet (price, registration, stamp duty, GST where applicable, loan EMI)
G5	**Loan pre-approval partner**	S	In-chat pre-approval through a DSA partnership (lenders pay DSAs 0.25–1 % of the *disbursed* home loan, by lender and volume); buyers arrive at visits financeable. Lenders on RBI's Unified Lending Interface (64 by Dec 2025) can pull land records and KYC with consent, cutting approvals from weeks to days where records are digitised

Why. Visits are the expensive step (agent hours, fuel, the seller's patience); a buyer who has walked the tour and is pre-approved converts at a multiple. Zillow's AI mode shows the expectation: the system *takes the next step* for you.

Day after. Half of first "visits" happen on the phone; the agent's calendar shows fewer, better visits; the buyer always knows what happens next.

Financial impact. Visits per deal from (assume) 12 to 7 → agent capacity +40 %; loan income of ₹20–80k on an ₹80 L loan (0.25–1 %), on deals we would have closed anyway — the model uses **₹40k net** per attached loan, after any share to a DSA partner.

Business impact. Buyer NPS; repeat and referral; a loan line that pays for the whole stack.

Agent time. −4 h/week of unproductive visits and coordination.

Risks. Cost sheets must be right (stamp duty and registration rules change); keep a disclaimer and a monthly check. DSA needs registration and compliance.

Success. Visits per deal; visit-to-offer rate; loan attach rate.

H. Transaction and closing — the AI transaction coordinator

Current status. Finance records the deal, token, invoices and GST; the steps between "Won" and registration (agreement, KYC, documents, bank, slot, registration, patta transfer, handover) live in people's heads and chats.

What we introduce.

#	Initiative	Effort	What it is
H1	**Transaction coordinator agent**	M	A per-deal checklist (token → agreement → KYC → loan sanction → registration slot → registration → patta/mutation → handover) with owners, dates, documents and nudges to buyer, seller, bank and advocate on WhatsApp; the CRM lead, the board card and the Finance deal linked
H2	**E-stamp, e-sign, KYC/PMLA**	S	Agreements e-signed; KYC collected in chat and stored under the finance guard; PMLA records once turnover passes the threshold
H3	**Registration intelligence**	S	Guideline value lookup, stamp duty and registration fee calculator, document list per property type, sub-registrar office and slot guidance
H4	**Post-registration follow-through**	S	Patta transfer, EB/water name change, society transfer, handover checklist, and the first "home anniversary" touch — the start of the after-sale relationship (I)

Why. Deals fall through between yes and registration; legal teams using AI report closing time cut 31 % and document review cost 44 % (vendor-reported, US). A coordinated closing is also where a brokerage earns trust and referrals.

Day after. Every open deal shows its stage and the next action with a date; the owner sees "6 deals, 2 waiting on bank"; nobody forgets the patta.

Financial impact. Fewer lost deals after token (assume 10 % → 4 %) = brokerage saved; faster cash collection (invoices tied to steps).

Business impact. Repeatable closings; a service clients talk about.

Agent time. −3 h/week per active deal.

Risks. Legal advice stays with advocates; the agent coordinates, it does not opine.

Success. Token-to-registration days; fall-through rate; receivable days.

I. After-sale and "maintain" — the recurring revenue lines

Current status. None. A sold property disappears from matches; a rented one is not managed; no relationship with past clients.

What we introduce.

#	Initiative	Effort	What it is
I1	**Rental and property management**	L	Tenant finding (our matching engine already serves tenants), verification, agreement, UPI AutoPay/e-NACH rent collection, maintenance tickets routed to vendors, quarterly inspection with photos, owner statements; priced at 8 % of rent plus one month's rent for each new tenant placed (the Chennai rental norm), with a 10 % NRI tier that adds inspections and bill payments. NoBroker charges 8 % without and 10 % with a rent guarantee at standard rates (5 % and 8 % on offer plans); we compete on service and verification, not price
I2	**Services marketplace**	M	Home loans (DSA), interiors (referral fees to be agreed per partner; ₹25–50k per signed project is the figure to test), movers, legal, cleaning, insurance — offered at the right moment by the transaction agent, tracked in Finance
I3	**Annual home value report**	S	Every past client receives a yearly price note for their home from the price desk, in Tamil/English, with "want to know what it rents for?" — the cheapest source of repeat listings
I4	**Client club and referrals**	S	Birthdays, anniversaries, registration anniversaries (Compass-style occasions) and a referral reward; all through WhatsApp, all measured
I5	**Investor products**	S	For investor buyers: rental yield notes, SM REIT/fractional options through a registered partner (advise and refer, never custody), portfolio reviews

Why. Brokerage income is lumpy; management and services income is monthly. NoBroker charges no brokerage, so its ₹1,000 cr comes from plans and services around the transaction — lines like these. The relationship after the sale is where the next listing comes from.

Day after. A sold flat becomes a managed asset or a future listing; the owner's dashboard gains a "recurring" line next to brokerage.

Financial impact (model). 100 managed units × ₹25,000 rent × 8 % ≈ **₹2.0 L/month** recurring by Oct 2028, plus about ₹0.6 L/month of tenant-placement fees at a 30 % yearly turnover (left out of section 8 as a cushion); services referral ₹20–50k per deal where a service is taken (assume 40 % take one, so ~₹15k averaged over all deals); value reports convert 3–5 % of past clients a year into listings.

Business impact. Valuation of the company shifts from commission book to recurring revenue; churn-proof relationships.

Agent time. Management needs an operations person, not agents; agents gain listings from I3/I4 at no time cost.

Risks. Management has service risk (maintenance, deposits) — start with 20 units and SLAs; referrals must be disclosed; investor advice stays with regulated partners.

Success. Managed units; recurring revenue share; repeat/referral share of listings.

J. The agent back office — Eåsy, the chief of staff (detailed in section 12)

Current status. Daily task, digests at 08:00/09:00/21:30, mentions and the AI queue exist; the agent still updates the CRM by hand, drafts every message, builds every presentation, and reports by memory.

What we introduce.

#	Initiative	Effort	What it is
J1	**Eåsy, proactive**	L	Each morning Eåsy has already: drafted follow-ups due, prepared visit briefs, flagged likely sellers, queued the content plan, reconciled yesterday's calls to notes, listed approvals. The agent clears, edits, sends. Eåsy works from the fact store and the approval queue — the S.MPLE 2.0 pattern
J2	**Voice and text commands**	M	"Move Shiva to negotiation, follow up Friday 4 pm, send him the Velachery tour" from WhatsApp or the CRM, in Tamil or English; confirmation before anything irreversible
J3	**Generators**	S	Listing presentation, CMA/price note, visit pack, offer letter, weekly owner report, Instagram captions — one tap, from facts
J4	**Weekly report that writes itself**	S	Monday: visits, conversion, feedback themes, media pipeline, money, what to change — to the owner and each agent
J5	**Approval queue and audit**	S	One queue for anything consequential; every AI action logged, undoable for 7 days (exists for stages; extended to messages, listings, prices); AI self-audit of accuracy

Why. This is the measured core of the SERHANT and Compass results (hours returned, GCI up). A small team with a chief of staff behaves like a team twice the size.

Day after. The agent's day starts with decisions, not data entry.

Financial impact. At 10 hours/week returned per agent (Compass reports 15–20), a 6-person team (A) gains ~250 productive hours a month — worth 2–3 extra deals a month if spent on sellers and visits (model).

Business impact. Scale without proportional hiring; new agents productive in days (Eåsy carries the process).

Agent time. −8 to −12 h/week.

Risks. Over-automation erodes judgement — keep approvals; measure AI accuracy weekly; one daily AI budget per feature.

Success. Hours returned (measured from task logs); approvals per day; AI accuracy; revenue per agent.

K. Data and intelligence — the moat

Current status. The platform already stores milestone dates, who moved what, AI verdicts and human undos, chat signals, visit declines, price edits, edit timings and post live times — read by almost nothing.

What we introduce.

#	Initiative	Effort	What it is
K1	**Nightly fact store**	M	Compressed, topic-wise facts (same pattern as the finance snapshot), the base for every agent, report and score; reads stay inside the free quota
K2	**Chennai price desk and demand map**	M	B3 plus the locality graph: price ranges by street/society, days on market, price-cut signals, buyer demand by locality/budget/config; monthly report (also a public content product)
K3	**Attribution**	S	Lead → source → post/ad → visit → deal → ₹; return per ad, per post, per portal
K4	**AI self-audit and ops sentinel**	S	Accuracy of AI placements and scores (from undos and outcomes), dead letters, failed syncs, cost per feature
K5	**3 PIN MCP server**	M	The fact store, match engine and analytics exposed to Claude/ChatGPT with the owner's login: "which localities are we losing buyers in?" answered from live data

Why. Every initiative above needs facts; the data is the one thing competitors cannot buy.

Financial impact. Enables everything else; avoids read-quota costs (the lead views already cut CRM opens from ~760 reads to 39).

Success. Fact-store freshness; questions answered without an engineer; attribution coverage of leads.

L. New business models — the large bets

#	Bet	What it is	Why it could be big	Guardrail
L1	**Verified-exclusive brokerage**	Every listing verified, priced, toured and distributed everywhere; exclusives as the default offer	Doubles revenue per property; the brand buyers trust	Keep Normal listings for owners who refuse
L2	**Rental and management ARR**	I1 at scale, NRI focus	Monthly income; a client base that re-lists through us	Operations SLA before scale
L3	**Embedded finance**	Loans (DSA), insurance, interiors referrals	₹20–80k per ₹80 L loan (0.25–1 %); services ₹20–50k per deal that takes one	Disclose; registered partners only
L4	**Eåsy for other brokers (SaaS, sold as 3 PIN Partners)**	License Eåsy, the price desk, the media pipeline and verification to Chennai brokers; or run the co-broking exchange	MagicBricks sells CRM to 85k brokers; a Tamil-first, verification-led product has no local owner	Only after it runs 3 PIN for a year; multi-tenancy is already in the code
L5	**Data products**	Monthly Chennai micro-market report, price notes for banks/NRIs, demand reports for developers	Developers and lenders pay for demand data; GEO citations compound	Aggregate only; no personal data
L6	**Investor distribution**	SM REIT/fractional referrals for investor buyers (₹10 L tickets, 8–10 % yields)	New product for the same client	Refer to SEBI-regulated platforms; never hold money

6. Why this succeeds here, and what would make it fail

Why it works. (1) The data and the pipeline exist; most of the plan is wiring and models, not new systems. (2) Tamil-first AI is now production-grade (Sarvam, Bhashini, Google's AI Mode in Tamil), and no Chennai agency we found uses it for listings, price notes or narration. (3) The owner already fronts content and already runs the post plan — the engine formalises what works. (4) Multi-tenant, serverless

and cheap to run: the stack scales without a team of engineers. (5) Each wave pays for the next (section 8).

What would make it fail. Building channels before facts (nothing to say); automating first contact before consent and quality (blocks, complaints); letting AI decide prices or Won; media formats without measurement; management without operations; a market slowdown met with fixed costs added too early (hires follow the wave exits, section 22); and too many parallel bets — hence the waves. The full risk register is section 25.

7. Sequencing — six waves, 24 months

Wave	When	Ships	Unlocks	Exit criteria
0 · Facts	Nov–Dec 2026	K1 fact store, K3 attribution, K4 sentinel, do-not-contact flag, roles, recorded-call consent texts; B6 nudges; the 16.8 fix-now release	Every later agent	Fact store fresh daily; 90 % of leads attributed
1 · Answer and act	Jan–Mar 2027	F1 voice agent, F2 calls → notes, F3 deal score, G1 one-command booking, J2 commands, J5 approval queue, J4 weekly report, F4 revival, F5 pre-visit brief, D4 matched push	Speed-to-lead; agent hours	Median first response < 60 s all channels; +2 h/week/agent returned, measured
2 · Seller autopilot	Apr–Jun 2027	B1 intake, B3/K2 price desk, B4 presentation + J3 generators, B5 approval + e-sign, A5 gap engine, C2 staging, C3 Tamil narration, C4 persona copy, G4 offer assistant; 3 PIN Chennai Index (R1) for 10 localities	Exclusives; trust	Exclusive share ≥ 40 %; owner-yes → live ≤ 7 days
3 · Showcase and distribute	Jul–Sep 2027	C1 media kit + splat tours, C5 microsites, C6 editor copilot, G2 virtual-first visits, D1 syndication, D2 GEO site, D3 WhatsApp channels, D5 Ask Eåsy on WhatsApp, E1–E5 content engine with attribution, U1 Monsoon Report	Reach; organic leads	Organic/portal share of leads ≥ 40 %; leads per listing three times the Wave 0 level
4 · Source and close	Oct 2027–Jan 2028	A1 likely-to-list, A2 outreach, A3 co-broking feed, A4 referrals, H1 transaction coordinator, H2 KYC/e-stamp, H3 registration intelligence, H4 follow-through, G5 loans, B2 verified badge, F6 coaching	Listings; closings; loan income	Listings/month 1.5 times Wave 0; fall-through ≤ 5 %; loan attach ≥ 30 %
5 · Recur and scale	Feb–Oct 2028	I1 management (20 → 100 units), I2 marketplace, I3 value reports, I4 club, I5 investor products, J1 Eåsy proactive, K5 MCP, D5 Ask Eåsy as a ChatGPT app, G3 portal, L4/L5 pilots	Recurring revenue; the full multiplier	Non-brokerage revenue ≥ 25 %, of which recurring ≥ 10 %; revenue per sales agent ≥ 5 times 2026

Each wave holds four to six M- or L-sized builds, sequenced inside the wave so that no more than three are in development at the same time (the S items ride along). Every release passes the same gate as today (review → fix → re-review → tests → rules → push), and every feature has a kill switch. A wave starts only when the previous wave's exit criteria are met or the owner records why not; hires follow the same gate (section 22).

8. The financial model — assumptions to replace with Finance's numbers

The model is a spreadsheet of nine inputs; everything else is arithmetic. Every input below is an assumption (A) for a Chennai mid-segment agency and is to be set from the Finance console and the

CRM's analytics before any number here is shown outside the company. **"Today" is a placeholder:** if Finance shows a higher base — likely, with 131 properties in inventory — the multiples fall while the rupee gains stay.

Input	Today (A)	Wave 2 · Jun 2027 (A)	Wave 5 · Oct 2028, base (A)	Source of truth
Leads per month	70	100	160	CRM analytics (leads created)
Lead → deal	2 %	3.5 %	5 %	`reached.won` ÷ leads
Average ticket	₹1.0 Cr	₹1.05 Cr	₹1.1 Cr	Finance deals
Brokerage per side	1 %	1 %	1 %	Finance invoices (the market runs 1–2 %; section 19)
Sides per deal (1 + share of deals where we act for both sides)	1.2	1.4	1.5	Listing type, Finance sides
Listings per month	8	12	20	Board cards created
Loan attach × net loan income	0	15 % × ₹40k	30 % × ₹40k	Finance, partner statements
Services referral, averaged over all deals	0	₹5k	₹15k	Finance
Managed units × rent × fee	0	20 × ₹25k × 8 %	100 × ₹25k × 8 %	Finance recurring

Brokerage per month = leads × conversion × ticket × fee × sides. Today ≈ 70 × 2 % × ₹1 Cr × 1 % × 1.2 = **₹1.7 L**. Wave 2 ≈ 100 × 3.5 % × ₹1.05 Cr × 1 % × 1.4 = **₹5.1 L** (₹5.9 L with add-ons). Wave 5 base ≈ 160 × 5 % × ₹1.1 Cr × 1 % × 1.5 = **₹13.2 L**.

Three cases at Wave 5 (Oct 2028), per month.

Case	Inputs	Brokerage	Loans	Services	Management	Total	Against today's ₹1.7 L
Downside	140 leads, 3.5 %, ₹1.05 Cr, 1.35 sides; 20 % loans; ₹5k services; 40 units	₹7.0 L	₹0.4 L	₹0.2 L	₹0.8 L	**₹8.4 L**	about five times
Base	160 leads, 5 %, ₹1.1 Cr, 1.5 sides; 30 % loans; ₹15k services; 100 units	₹13.2 L	₹1.0 L	₹1.2 L	₹2.0 L	**₹17.4 L**	about ten times
Stretch (benchmark level)	180 leads, 6 %, ₹1.2 Cr, 1.6 sides; 35 % loans; ₹25k services; 150 units	₹20.7 L	₹1.5 L	₹2.7 L	₹3.0 L	**₹27.9 L**	about seventeen times

Not in any case: development mandates and JV fees (section 14), tenant-placement fees, data products, and any fee above 1 % per side. These are the cushion. Brokerage and services carry GST at

18 % on top; the figures are before GST.

What the base case asks for. Conversion at the level structured Indian teams report (4–6 %), not the best (8–10 %); half the listings exclusive; 100 managed units, which needs the operations hires in section 22. The downside case is what happens if conversion moves but sourcing and management stall; it roughly covers the plan's costs, which is why every hire waits for its gate (section 27).

Costs (run-rate, A). AI and telephony APIs ₹25–60k/month at Wave 5 (voice minutes, Tamil TTS, transcription, LLM calls under per-feature budgets); media tools and splat hosting ₹15–30k/month; e-sign/KYC per use; the people in section 22; engineering as today (the platform is built in-house with Claude Code). **Payback:** one extra deal a month (₹1.2 L at today's ticket and sides) covers Wave 1's run cost several times over.

Agent time (A). Per agent per week: back office −8 to −12 h; chasing and notes −5 h; unproductive visits −4 h; sourcing calls +2 h; net **−15 to −19 h** (the area figures in section 5 overlap; this is the de-duplicated estimate), i.e. a 6-agent team gains the capacity of two to three more agents without hiring.

9. The scorecard the owner watches

North-star	Why	Target by Oct 2028
Revenue per sales agent per month	The whole plan in one number	≥ 5 times 2026 (base case: almost 8)
Median first response, all channels	The conversion lever	< 60 s
Lead → deal	Quality of the whole funnel	≥ 5 % (stretch 6 %)
Exclusive share of listings	Revenue per property, trust	≥ 50 %
Listings per month and source mix	Growth ceiling	20 a month (2.5 times today); ≥ 30 % from sourcing/referrals
Organic share of leads	Cost structure	≥ 40 %
Owner-yes → live days; token → registration days	Operational speed	≤ 7; ≤ 45
Non-brokerage share of revenue (of which recurring)	Company value	≥ 25 % (≥ 10 %)
Blended ad cost per lead; acquisition cost per deal (section 20)	Efficiency	≤ ₹400; ≤ ₹25,000
Hours returned per agent per week (measured)	Capacity	≥ 12
AI accuracy and undo rate	Safety	≥ 90 %; < 5 % undone

10. Guardrails and regulation

- **People decide:** Won, listings going public, prices, agreements and first contact are approved by a person; every AI action is logged and undoable.
- **DPDP Act and Rules (notified 13 Nov 2025):** consent texts for recorded calls and marketing; purpose limits; deletion schedules; breach reporting; processor agreements with every AI vendor; the main duties bind from **13 May 2027** — Wave 0 includes the texts and the flags. Registered consent managers operate from Nov 2026; using one later makes consent portable and auditable.
- **Insurance:** referrals only through a licensed corporate agent or broker partner; IRDAI's 2026 consultation proposes lower commission caps and a ban on forcing insurance with loans, so model

insurance income at zero until the final rules are out.

- **TRAI:** no unsolicited AI calls; promotional calls only from a registered 140-series number and never to numbers that block real estate on the DND registry (the 1600 series is for regulated financial entities and government, not for us); outbound AI calls only to opted-in numbers.
- **TNRERA:** the agency's agent registration (₹25,000 for a firm; renewal at half) must be current and quoted on every project listing; projects on more than 500 sq m of land or with more than eight apartments must be registered before they are marketed.
- **WhatsApp:** free-form only inside the 24-hour window; approved templates otherwise; utility messages stay utility.
- **RERA and advertising:** AI-staged images labelled; facts in listings from the verified record; no invented features.
- **PMLA/KYC** once turnover passes the threshold; **SEBI**: investor products through registered platforms only; **loans** through a registered DSA.
- **AI budgets:** one daily budget per feature; a kill switch per feature; accuracy reviewed weekly.

11. What to decide now

1. **Set the nine model inputs from Finance** this month, so every target in sections 8, 9 and 20 becomes a real number before it is shown to anyone outside the company.
2. **Approve Wave 0 and Wave 1** (facts, answer-and-act) and the 90-day plan (section 26) to start in November.
3. **Approve the fee card** (section 19): exclusive terms and fee, the Sell-in-30 conditions, the management and NRI tiers — so Wave 2 has something to sell.
4. **Approve the name system** (section 17): Eåsy as the one assistant (wordmark, and every reminder speaking as Eåsy from Wave 1), plus 3 PIN Verified, the Chennai Index, the Property Passport, the Monsoon Report and Sell-in-30.
5. **Choose the telephony partner and the Tamil voice vendor** (with written consent for the owner's cloned voice), keeping a second vendor for each (section 25).
6. **Pick the first three micro-markets** (section 21) and the first three sole-selling mandate targets; choose the legal entity for the development chain (section 14).
7. **Confirm compliance basics:** the TNRERA agent registration is current; the DPDP consent texts and the do-not-contact flag ship in Wave 0.
8. **Approve the people plan** (section 22): the hiring gates per wave, the incentive changes from Wave 1, and a named operations owner for rentals and management before the 20-unit pilot.
9. **Set the funding stance** (section 27): self-fund Waves 0–3 from operating cash; review outside capital at the Wave 3 exit, and only at project level for the development chain.

12. Eåsy by 3 PIN — a personal AI staff for every user

BY 3 PIN

Wordmark: **Sora Bold**, lowercase, tight tracking; the ring of the **å** in brand orange `#FF8A00` — the "always on" light. Ink `#111` on white, white on ink for dark. Never stretched; never with a drop shadow. Spoken as "easy". App icon: the orange ring alone on an ink tile.

What it is. Eåsy is the one place every person at 3 PIN — agent, shooter, editor, accounts, the owner — asks for anything and gets it done: on WhatsApp, in the CRM, by voice in the car. It is the chief-of-staff layer from section 4, given a face. It knows the user's role, their leads, cards, visits, shoots, deals and the whole fact store (section K), and it can *act* through every tool the platform already has: drafts, bookings, brochures, catalogues, calendar, Posting, Finance. Anything consequential goes to the approval queue; everything else just happens.

What you can ask — the first fifty. All answered from live data, in Tamil or English, text or voice.

Ask Eåsy...	What it does	Needs
"What is my day?"	Visits, follow-ups due, shoots, edits, approvals waiting, mentions — ordered by value, with one-tap actions	Daily task + fact store (exists)
"Is any shoot scheduled this week?" / "Who shoots the Anna Nagar flat?"	Reads the board; offers to call the shooter or move the slot	Board (exists)
"Do I have to follow up anyone today?" / "Who went cold?"	The follow-up queue by deal score; drafts each message	F3, F4
"Remind me to call Shiva at 4" / "Remind me every Monday to check the Velachery seller"	Reminders become follow-ups and calendar entries; recurring ones are rules	CRM + calendar (exists)
"Send the Velachery 3BHK brochure to Shiva"	Finds the lead and the property, picks the latest brochure, sends on WhatsApp with the microsite link, logs it on the lead	Brochure pipeline + TailorTalk (exists)
"Make a catalogue of matching properties for Priya and send it"	Runs the match engine for her, builds a PDF/WhatsApp carousel (photos, price, tour link, why it matches), you approve, it sends and records what was shared	Match engine (exists) + C4/C5
"Which property can I close with my current leads?"	Ranks your stock by number and heat of matched buyers, visit feedback and area trend; says which three to push and to whom	F3 + K2
"What is the rate in Anna Nagar H Block?" / **"Recent transactions in Anna Nagar H Block"**	Price desk: guideline value, our comparables, portal asks, registration-data comparables where licensed, with dates and ₹/sq ft; a one-page note on request	B3/K2 + registration data partner
"Which areas are hot this month?" / "Where are we losing buyers?"	Demand map: enquiries, visits, vetoes and unmet demand by locality, budget and configuration	A5/K2
"Show me analytics for last month" / "How did Instagram do?"	Leads, visits, conversion, leads per post, cost per lead, revenue — as a card, with the chart	K3
"Ask the seller if he can show the flat Saturday 11"	Messages the seller on WhatsApp in their language, reads the reply, books the slot, tells the buyer and the agent	TailorTalk + calendar (exists) + G1
"Book a site visit for Shiva at the Adyar villa, 2 pm tomorrow"	One-command booking (G1): free agent by rule, invitations, buyer pack	G1
"Generate the commission agreement for this seller"	Fills the Exclusive/Collab/Normal template from the card (owner, property, price, fee, term), sends for e-sign after your approval, files it with the deal	B5
"Draft the offer for Shiva at 1.45 Cr" / "What should we counter?"	Offer and negotiation assistant (G4) with comparables and the seller's floor	G4
"Create the price note for the Perumbakkam seller" / "Make the listing presentation"	Generators (J3): PDF and a 60-second video in the owner's language	B3/B4
"What is missing on the Kilpauk card?" / "Chase the seller for the EC"	Reads the documents checklist; sends the nudge with the how-to link	B6
"Post the Anna Nagar reel to Instagram and YouTube on Friday 6 pm"	Schedules in Posting; confirms when live and saves the URL	Posting (exists) + D1
"Plan next week's content"	Content plan from inventory and last month's results (E1)	E1
"Move Shiva to negotiation, follow up Friday" / "Mark the Velachery flat sold"	CRM and board updates by voice, confirmation before anything irreversible	J2
"What happened on my calls today?"	Calls → notes (F2): the summary and the follow-ups it set	F2
"Raise the buyer-side invoice for the Adyar deal" / "What is owed to us?"	Finance: invoices, receivables, GST, cash forecast	Finance (exists) + K

Ask Eåsy…	What it does	Needs
"How much did we make from Instagram leads this quarter?"	Attribution to ₹	K3
"Which of my past clients might sell?"	Likely-to-list scores (A1) with the reason and the script	A1/A2
"Find me three 2BHKs in Velachery under 90 L"	Sourcing inbox (A3) and co-broking stock, de-duplicated against ours	A3
"Explain stamp duty for a 1.2 Cr flat in Chennai" / "What documents for a plot sale?"	Registration intelligence (H3) with a cost sheet	H3
"Where is the Adyar deal stuck?"	Transaction coordinator (H1): stage, who, since when, next nudge	H1
"Prepare me for the 5 pm visit"	Pre-visit brief (F5)	F5
"Write a Tamil caption for this" / "Translate this to Tamil"	Copy and language layer (C3/C4)	C3/C4
"What is the rent for a 2BHK in Medavakkam?" / "Which of our owners would rent out?"	Rental desk for the management line (I1)	I1
"What should I do next?"	The one next best action across everything, with why	F3

How it answers. Every question becomes a plan: understand (role, who "Shiva" is, which property "the Adyar villa" is — from the fact store, never guessed), fetch (facts, price desk, match engine), act (tools with the same permissions the user has), confirm (anything that sends, books, prices or signs is shown first). The same engine serves WhatsApp (TailorTalk's assistant action), the CRM's command bar, voice (speech in Tamil/English via Sarvam), and the owner's MCP connection to Claude/ChatGPT. Every answer carries its sources (the card, the deal, the comparable) so it can be checked in one tap.

Reminders and the proactive side. Eåsy is not only asked; it tells. It owns the morning brief, the "going cold" nudges, document chasers, shoot-day packs, visit reminders to buyers, the Monday report and the evening summary — one voice for every reminder the platform already sends today, plus the new ones. Each person can tune what Eåsy raises and when (Settings → Configurations), and every reminder shows why it fired.

Per role. The agent sees leads, visits and stock; the shooter sees the day and the access notes; the editor sees cuts and deadlines; accounts sees money; the owner sees everything plus approvals and analytics. Role claims in the database rules (Wave 0) make this real rather than cosmetic.

Why it is the centre of the plan. The twelve areas above are features; Eåsy is how people use them. S.MPLE's measured result (28,000 hours returned; +144 % commission income) came from exactly this: one assistant that knows the business and acts. For a small team it is the difference between "we have tools" and "work gets done".

Money and time. No new revenue line of its own; it is the multiplier on every other one. Expect 8–12 hours a week per person returned (J1), faster onboarding of new agents (the process lives in Eåsy), and the owner's decisions made from live numbers instead of memory. Run cost is API usage under per-feature budgets (section 8).

How to build, in three steps. (1) *Ask*: the command bar and WhatsApp assistant over the fact store and the existing tools — read-only answers and drafts (Wave 1). (2) *Act*: bookings, sends, catalogues, agreements, posting, finance — with the approval queue and 7-day undo (Wave 2–3). (3) *Anticipate*: the proactive morning plan, likely-to-list, next best action, recurring rules (Wave 4–5). Voice and Tamil from step 1.

Guardrails. Eåsy never invents a fact (an answer without a source says so), never contacts a person outside consent, never marks Won, prices or signs without a human, logs every action, and respects do-not-contact everywhere.

Risks. Wrong answers sent to clients (hence sources on every answer and approval on every send); dependence on one model vendor (keep the prompts and tools vendor-neutral, section 25); a team that stops checking (weekly accuracy review, K4).

Success. Every team member uses Eåsy every working day; ≥ 70 % of asks answered without a person by Wave 3; approvals cleared within one working day; hours returned per person measured from task logs (≥ 8 by Wave 5); 100 % of answers carry a source; undo rate < 5 %.

13. Leading the sector — the advanced bets

Ideas that use the data no one else in Chennai has, each with a clear first step. The second table puts each bet in the plan's initiative format.

#	Bet	What it is	Why it wins	First step (≤ 3 months)
R1	**3 PIN Chennai Index**	A monthly, public price and demand index by micro-locality (street, society, configuration) from the price desk: asks, closings, visit feedback, vetoes, days on market	The quoted source for Chennai prices in press, AI answers and bank conversations; sellers come to the agency that publishes the number	Publish for 10 localities from existing data; one page each in Tamil and English
R2	**Property Passport**	A living digital record per property: verified documents, measurements, floor plan, tour, every valuation, maintenance and rental history — transferable to the next owner	Turns a one-time sale into a lifetime record 3 PIN keeps; the natural home for management, value reports and the next listing	Start the passport for every verified listing (B2) and every managed unit
R3	**Transparent bidding for exclusives**	For priced-to-sell exclusives: a time-boxed, verified-buyer offer window with a live count, run by Eåsy, seller sees every offer	Best price for the seller in days, fewer rounds for agents, a reason to list exclusive	Pilot on 3 exclusives with the matched-buyer base
R4	**Sell-in-30 programme**	Exclusive + verified + full media + bidding + matched outreach, with a published 30-day target and a fee reduction if missed (terms and economics in section 19)	A promise competitors cannot make without the pipeline	Define terms; run with 5 sellers; publish results
R5	**Instant-offer bridge (investor-backed)**	For owners who must sell now: an investor pool buys at the price-desk floor within 7 days; 3 PIN resells with its media and buyer base	iBuying-lite without balance-sheet risk; stock at a known discount	Term sheet with 2–3 investors; 1 property
R6	**3 PIN Partner network**	Independent Chennai brokers run on Eåsy, the price desk, verification and the media pipeline under a revenue share; shared, verified inventory	The sector's operating system; many more listings without matching headcount; co-broking leakage becomes income	Onboard 5 partner brokers on the multi-tenant platform (already built)
R7	**Eåsy for buyers and owners**	A consumer edition: search by talking, verified listings with tours and price notes, visit booking, offers, loan pre-approval, the passport for owners	Owns the relationship portals rent to us	Ship as WhatsApp first (D5), then web
R8	**Data products**	Demand and price reports for developers, lenders and NRIs; absorption by micro-market; what to build where (section 14)	Developers and banks pay for demand data (PropEquity and Liases Foras cover metros; we found no one at street level in Chennai)	One developer, one report, one price
R9	**NRI desk**	Verification, management, value reports, remote selling with e-sign and video registration support, in English and Tamil	NRIs are Chennai's highest-trust-deficit segment; recurring management revenue	Package I1 + B2 + H2 for NRIs; 10 clients
R10	**Managed-rental supply with a first right to buy**	Owners' vacant units managed and rented to pre-qualified tenants who get a first right to buy at the then price-desk value (never a fixed future price — see U14); the data tells which units and tenants fit	Fills vacant stock, feeds future sales, management ARR	10 units from the rental desk

The bets in the initiative format. Money figures are assumptions (A) to test in the first step.

#	Today	The day after	Money (A)	Agent time	Main risk → guard	Success measure
R1 Index	Price edits, visit feedback and closings stored, read by nobody	10 locality pages a month in Tamil and English; journalists and AI answers quote them	No fee at first; seller enquiries; feeds R8	Owner 1 h/month to approve	A wrong number in public → publish ranges with sample size; nothing under 5 data points	Citations; enquiries that name the Index
R2 Passport	Documents checklist per card	Each verified owner holds one link to every paper, measurement and valuation	Retention: resale listings and management from holders	None after setup	Holding documents raises DPDP and security duties → DigiLocker links, not copies, where possible	Passports issued; resale listings from holders
R3 Bidding	Offers by phone, one at a time	A 7-day offer window with a live count; the seller sees every offer	Sale price closer to ask; fewer rounds	−2 h per exclusive	Buyers dislike auctions → offers non-binding until token; seller may accept any time	Sale-to-ask ratio; days to first offer
R4 Sell-in-30	No time promise	A public 30-day promise on qualifying exclusives	Higher fee on exclusives (section 19)	Shared across the team	Misses → only priced-in-range listings qualify	% under offer in 30 days; exclusive share
R5 Instant offer	Distressed sellers go elsewhere	A cash offer at the price-desk floor in 7 days	Resale fee plus a share of the investors' margin	Deal-by-deal	Price risk sits with investors → written mandate; 3 PIN holds no stock	Bridge deals closed; investor return
R6 Partners	Co-broking by phone, fees split ad hoc	5 brokers on the platform, sharing verified stock	Platform fee or a share of fees on network deals	Onboarding 1 day per partner	Brand and data leakage → partner standards, tenant isolation (built)	Partner deals per month; partner retention
R7 Eåsy for buyers	Buyers chat with TailorTalk about intake only	Buyers search, book and track in one chat	Leads at near-zero cost	Fewer first calls	Wrong answers → sources on every answer; a person for offers	Visits booked by Eåsy; buyer NPS
R8 Data products	Demand data unused outside	One paying developer report	₹2–5 L per report	Analyst time 2–3 days per report	Personal data → aggregates only	Paying clients; repeat orders
R9 NRI desk	NRIs served case by case	A packaged service with a fixed fee	Management at the 10 % tier plus sale fees	Relationship manager (section 22)	FEMA and remote KYC → regulated partners, checklist per case	NRI clients; NRI managed units
R10 Managed supply	Vacant stock waits	Vacant units let to pre-qualified tenants	Management ARR; future sale fees	Operations, not agents	Vacancy and tenant default → deposits, verification, rent guarantee only with a partner	Days to let; tenant-to-buyer conversions

14. The next chain of business — joint ventures, construction and redevelopment

The case in one line. A brokerage knows what sells; a developer builds what it hopes sells. With the demand map, the price desk, the buyer base and the media engine, 3 PIN knows — by locality,

configuration and price band — what is short, at what price, with buyers already waiting. That is the most valuable input a development has, and it is the input 3 PIN can sell, partner on, or build on itself.

What the market looks like. In Chennai, joint ventures between landowners and builders typically give the landowner 40–55 % of built-up area in established areas (Valasaravakkam ~45 %+, Iyyappanthangal/Maduravoyal 40–45 %) and 35–42 % in emerging corridors; the builder funds construction, approvals and sales. Projects on more than 500 sq m of land or with more than eight apartments must register with TNRERA before marketing; smaller ones are exempt, and the agency selling registered projects needs its own TNRERA agent registration. Developer sole-selling mandates pay 2–4 % of sales against 1–2 % for ordinary channel partners. Demand data (Knight Frank, Jan–Sep 2026): ₹50 L–1 Cr is 47 % of sales; homes above ₹1 Cr rose to 42 % of sales; homes below ₹50 L fell 46 %; launches fell 7 % while sales rose 2 %, so unsold stock clears in 4.4 quarters — a market where a builder with pre-sold demand has the advantage. New formats are arriving: **built-to-suit co-living** (Truliv's 728-bed block at Navalur on OMR, built, sold to investors, leased and operated) and **senior living** (Ashiana's 22.7-acre project at Mahindra World City; Columbia Pacific across Chennai and Coimbatore) — both covered in 15.4.

The ladder — five steps, lowest risk first. Each step uses the previous one's data and relationships; none requires construction risk until step 4, and step 4 is deliberately small.

Step	Business	What 3 PIN brings	What 3 PIN earns	Risk	When
1	**Sole-selling and launch mandates** for small and mid developers	Demand evidence for their project, a pre-qualified buyer base, the media engine, Eåsy for their sales team, verified-process branding	2–4 % of sales value; marketing retainers	Low (effort only)	Now — use the demand map to pick 3 projects that match unmet demand
2	**Development advisory and data**	"What to build here" reports: configuration mix, pricing, absorption, buyer profile, by plot; feasibility against the price desk	₹2–5 L per report; retained advisory; mandate on the project	Low	Q1 2027
3	**JV facilitation and land aggregation**	Landowners from the likely-to-list engine and past clients; builders from step 1; the price desk sets a fair ratio; 3 PIN structures and documents the JV and takes the selling mandate	1–2 % of land value as facilitation + the mandate + management of the built units	Low–medium (legal)	Q2 2027
4	**Co-development of boutique projects** (≤ 8 units on ≤ 500 sq m, under the RERA threshold — or registered voluntarily, which is itself a selling point — in demand pockets the data names) with a construction partner	Site selection from the demand map, pre-sales from the buyer base (bookings before ground-break), marketing, exit; the partner builds	Developer margin share (15–25 % of project value is the typical developer margin band; 3 PIN's share by equity and role) + mandate	Medium (capital, execution)	H2 2027 after step 3 has two JVs
5	**Redevelopment of 25–35-year-old apartments**	Society outreach (data: age, FSI headroom, demand), owner consensus tools, developer selection, 3 PIN as the marketing and resident-liaison partner	Facilitation, mandate on the surplus units, management of the rebuilt block	Medium (long cycle)	2028

Why the next twelve months, and why 3 PIN.

- *Demand is legible now.* By Wave 2 the demand map says, per micro-locality, how many buyers wait at which budget and configuration, what they vetoed and why. A developer with that list pre-sells; one without it guesses. Pre-sold projects finance themselves.
- *Pricing is defensible.* The price desk (guideline value, comparables, asks, closings) prices units to move; the index (R1) makes 3 PIN the public reference.
- *Buyers are already in the base.* Hundreds of qualified buyers with recorded requirements convert a launch into bookings in weeks; Eåsy's catalogues do the outreach.
- *Marketing is a machine, not a cost.* Media kits, tours, Tamil narration, portals and content run per project at marginal cost.
- *Landowners are our sellers.* The likely-to-list engine finds owners whose plots suit a JV before a builder's canvasser does; the verification badge and e-sign make 3 PIN the party both sides trust.
- *Capital is lighter than it looks.* Mandates and facilitation are fee income; co-development can start with one boutique project with pre-sales covering most of construction.

Illustrative numbers (assumptions to test on the first project). A boutique 8-unit project in an established pocket: 8 × 1,400 sq ft × ₹12,000 = ₹13.4 Cr sales. Mandate at 3 % = **₹40 L**. Facilitation on a ₹5 Cr land JV at 1.5 % = **₹7.5 L**. A 20 % co-development stake on a 20 % project margin = **₹54 L** over the project. One such project a year, plus three mandates on others' projects at ₹1–1.5 Cr of fees each at scale (₹35–50 Cr of sales each at 3 %), would exceed the base-case brokerage line in section 8 (about ₹1.6 Cr a year) — and every unit sold enters the passport, management and resale cycle. None of this is in the section 8 cases; fees are earned as units sell, over 18–36 months, so cash arrives later than the bookings. An 8-unit project of 1,400 sq ft flats needs about 2 FSI on a 500 sq m plot; check the plot's permissible FSI before any figure is shared with a landowner.

Branding. "Built on demand" — projects launched with the number of waiting buyers printed on the hoarding and verified by the index; the agency that tells developers what Chennai wants. This is the story that makes developers, landowners and investors call first.

Risks and guardrails. No construction before two JVs have closed through step 3; a construction partner with a track record, with 3 PIN's role defined in writing (marketing, sales, liaison, data); RERA registration where thresholds apply; separate legal entity and accounts for development; capital at risk capped per project; escrow for buyer money; no price or demand claim in marketing that the fact store cannot support.

Twelve-month sequence. Nov–Dec 2026: demand map and price desk from existing data; pick 3 mandate targets. Jan–Mar 2027: first two sole-selling mandates; first "what to build here" report. Apr–Jun 2027: JV facilitation offer to landowners from the likely-to-list engine; first JV documented. Jul–Sep 2027: second JV; site chosen for the boutique co-development from the demand map; pre-sales list built. Oct 2027: term sheet with the construction partner; bookings opened to matched buyers. By Oct 2028: first project delivered into the passport and management lines.

15. International watchlist and the untouched ideas

What shipped in the last twelve months that a firm like 3 PIN must measure itself against, and the ideas nobody in Chennai has touched. Each row ends with what 3 PIN does about it.

15.1 Releases to compete with (Oct 2025 – Oct 2026)

Release	What it is	3 PIN's answer	Gap to close in 12 months
SERHANT. S.MPLE 2.0 / Dot (Sep–Oct 2026)	Proactive AI chief of staff over the agent's calendar, email and CRM; 70+ agents and tools	**Eåsy by 3 PIN** (section 12)	Ask and the approval queue in Wave 1 (voice included); act in Waves 2–3; the proactive morning plan in Waves 4–5
Lofty AOS (Feb 2026)	"Agentic operating system": coordinated AI agents across sales, social and homeowner prospecting	Eåsy + the sourcing engine (A1–A2) + content engine (E)	Homeowner prospecting from owned data (A1) by Wave 4
Rechat "Hey Lucy", AI Memo, AI-built websites (Apr–Sep 2026)	Voice-first commands from the car; conversations captured into the CRM in real time; brokerage sites built from CRM data and *built for AI agents to read*	J2 commands; F2 calls → notes; D2 site with structured data and an `llms.txt` so AI agents read our stock	Voice commands in Tamil by Wave 1; AI-readable site by Wave 3
Compass AI Assistant / Compass One (Jul 2026)	Assistant inside the pipeline: briefings, likely-to-sell, record updates; a client portal for every stage	J4 reports, A1 likely-to-list, G3 "My 3 PIN" portal	Portal on WhatsApp first (Wave 5)
Zillow AI mode (Mar 2026), **Zillow Immerse** on Apple Vision Pro	Search by describing the home; guided next steps; spatial walkthroughs of listings	D5 "Ask Eåsy"; C1 splat tours; a **spatial lounge** for premium and NRI buyers (15.2)	Conversational search on WhatsApp by Wave 3; the ChatGPT app (Zillow's Oct 2025 model) in Wave 5
Luxury Presence SEO + GEO + weekly social and paid	Agencies' content, GEO and ads produced every week by AI	D2 + E1–E3	Locality guides in Tamil and English cited by AI answers — Wave 3
AppFolio Realm-X ↔ Claude; data providers (Green Street, MSCI, ATTOM, Regrid…) publishing **MCP servers**	Property operations run from inside an AI assistant; licensed data plugged straight into Claude	K5 3 PIN MCP server; R8 data products	Owner's live-data questions answered through Claude by Wave 5; a partner-facing MCP for banks and developers after
PRYPCO Mint + Dubai Land Department (Feb 2026)	Government-backed tokenisation of title deeds; AED 18.5 M in the pilot from 50+ nationalities	L6/R-series: distribute SEBI-regulated SM REIT and fractional products; watch Indian tokenisation rules	Investor product desk by Wave 5; no custody, ever
First Street climate risk on Zillow (added Sep 2024, removed Dec 2025 after agent complaints)	Flood, wildfire, heat scores on every listing	U1 **Monsoon Report** (15.2), designed from Zillow's lesson: resilience facts, not a scare number	Wave 3, with the microsites
Roam / RetroRate (assumable mortgages, $500 M sales), **Flyhomes** buy-before-you-sell, **Pacaso** co-ownership (89 % occupancy vs 39 % for owned second homes)	Finance-led proptech: new ways to afford, bridge and share homes	U7 co-ownership for weekend homes; U9 bridge for upgraders; both through regulated partners	Pilots in 2028, after the finance desk (G5) runs
Embedded insurance ($156 B → $703 B by 2029)	Cover sold inside rental, mortgage and property platforms	U8 at registration and at lease	Partner and API by Wave 5

Release	What it is	3 PIN's answer	Gap to close in 12 months
AI property management (vendors claim ≈80 % of tasks automated); **construction robotics** (Monumental €27 M; 30–50 % labour savings on affected scopes); **digital twins**	Operations and building run on live data	I1 management on Eåsy; digital twin as the Property Passport for new builds (section 14)	Management line first; twins with the first co-development
India: Tamil Nadu e-registration mandatory for first sales from 17 Aug 2026 (Anywhere Registration, Aadhaar biometrics, presenceless deeds); **ULPIN / Bhu-Aadhaar** rolled out; **DigiLocker** holds deeds and ECs; **Account Aggregator** (₹3.82 lakh crore of loans in FY26; 7–15-day approvals); **UPI AutoPay** mandates	The rails for remote, verified, financed transactions now exist	H2/H3 closing built on these rails; U2 NRI remote registration; U4 pre-approval in chat (Account Aggregator and the Unified Lending Interface); I1 rent on AutoPay	Waves 4–5 — this is the part competitors abroad cannot copy
India: Meta Business Agent on WhatsApp (Jul 2026); **Google AI Mode in Tamil** (Oct 2025); **Poonamallee–Vadapalani metro** open (11 Oct 2026)	A free chat agent for every business; AI answers in Tamil; a new rail corridor through west Chennai	Compete on knowledge, not reply speed (24); Tamil GEO (D2); the west corridor as a launch micro-market (21)	Waves 0–3

15.2 Untouched in Chennai — the ideas with no local owner

#	Idea	Why nobody has it	What 3 PIN does	Benefit
U1	**3 PIN Monsoon Report** — flood resilience per listing (deliberately not a score)	35.6 % of Chennai is mapped flood-prone (Semmancheri 83 %, Saidapet 74 %, Sholinganallur 74 %, Siruseri 60 % within 2 km); every buyer asks, no listing answers. Zillow learned that a bare "risk score" costs sales	A **resilience page** per property: inundation-zone status, floor level and stilt height, 2015 and 2023 history from the society, drainage works nearby, insurance options — facts with sources, never a single frightening number; the price desk uses it	Trust that converts; premium for high-ground stock; the question answered before the visit
U2	**Register from anywhere** — NRI remote closing	Mandatory e-registration for first sales (Aug 2026) and presenceless deeds exist; nobody packages them	A fixed-fee service: documents in DigiLocker, Aadhaar-based remote attestation, slot and liaison by the transaction agent, video walkthrough of the flat the day before	The NRI desk's anchor product (R9); closings in weeks from abroad
U3	**Property Passport on DigiLocker**	DigiLocker already stores deeds, ECs and tax receipts; no agency builds the owner's wallet around it	Every verified listing and managed unit gets a passport: documents, ULPIN, measurements, tour, valuations, maintenance; transferable at sale	The record that makes 3 PIN the lifetime agency (R2)
U4	**Pre-approval in chat** via Account Aggregator	Banks approve in 7–15 days through AA; brokers still send buyers to branches	Consent-based pre-approval inside WhatsApp with the DSA partner (G5)	Financeable buyers at every visit; loan income
U5	**Spatial lounge** for premium and NRI	Vision Pro listing apps exist (Zillow Immerse, Rocket Homes); Chennai has no spatial showroom	One headset in the office and a loan set for premium sellers' living rooms; splat tours and JV project twins viewed at full scale; remote sessions for NRIs	Premium listings choose 3 PIN; fewer flights for NRI buyers
U6	**AR staging on site** for JV and boutique projects	Developers sell from brochures; AR staging at the site (R2U's model) is used by large developers abroad	Pre-sales on the plot: the buyer stands on the site and sees the flat at full scale	Bookings before ground-break (section 14)
U7	**Co-ownership of weekend homes** (ECR, Pondicherry, Kodaikanal, Yelagiri)	Pacaso proved 89 % occupancy; Indian structures (LLP/company shares) exist; no Chennai operator	Curated homes, 1/4 to 1/8 shares, managed and booked through Eåsy; legal structure and SEBI boundary checked first	A new asset class for the same clients; management ARR
U8	**Embedded insurance**	Home, rent-default and title cover are sold nowhere in the transaction	Offered at registration and at lease signing through a licensed partner	Income per deal; safer tenants and owners
U9	**Buy-before-you-sell bridge** for upgraders	Sales above ₹1 Cr grew 26 % in Jan–Sep 2026 to 42 % of the market (Knight Frank); upgraders are stuck selling first	A bridge product with an NBFC partner, sized from the price desk	Unlocks upgrader deals (two transactions each)
U10	**Tokenised and fractional distribution**	SM REIT framework live; tokenisation rules forming	Distribute, never custody; a watch brief on DLD-style tokenisation	Investor product line
U11	**Websites built for AI agents**	Portals optimise for Google; nobody for ChatGPT/Gemini agents	`llms.txt`, structured data, verified facts, Tamil and English locality guides (D2)	Cited in AI answers; organic leads
U12	**Senior and NRI-parent living**	Managed rentals with care partners do not exist here; demand from NRIs is constant	A managed-rental tier with care, maintenance and reporting partners (I1)	Recurring, high-trust revenue

#	Idea	Why nobody has it	What 3 PIN does	Benefit
U13	**Construction robotics and digital twins**	Boutique builders use neither	For the co-developed projects: twin from design to passport; robotics via the construction partner where it pays	Faster, documented builds; the passport from day one
U14	**Rent-to-own — avoided**	Divvy's predetermined-buyback model collapsed when rates rose	Only managed rental with a first right to buy at the then price-desk value, never a fixed future price	The benefit without the balance-sheet risk

15.3 How 3 PIN compares at international level — the target, by wave

Twelve months from now (end of Wave 3, Sep 2027) the first four rows have their first version live; the rest follow in Waves 4–5.

Capability	World's best today	3 PIN target (plan reference)	By
Proactive AI staff	SERHANT Dot, Compass AI Assistant	Eåsy: ask + act in Tamil and English; anticipate later (12)	Ask W1, act W3, anticipate W5
Conversational search and guided next step	Zillow AI mode, Zillow in ChatGPT	Ask Eåsy on WhatsApp; visit booked in the same chat (D5, G1)	W3; ChatGPT app W5
Immersive listing	Zillow Showcase/Immerse, Matterport splats	Splat tour + microsite + Tamil narration on every exclusive (C1, C3, C5)	W3
Market data in public	Portals' price trends (city level)	3 PIN Chennai Index by micro-locality (R1)	W2
Seller prospecting	Lofty AOS, SmartZip/Offrs	Likely-to-list from owned data + Chennai records (A1)	W4
Verification and closing	Landeed, AppFolio + Claude, TN e-registration	Verified badge, passport, remote registration (B2, U2, U3)	W4
Recurring revenue	NoBroker management, embedded insurance	Management + loans + insurance + value reports (I)	W4–5
Development intelligence	PropEquity, Liases Foras (metro level)	Street-level demand map feeding mandates and JVs (14)	W2 onward
Data openness	MCP servers from data providers	3 PIN MCP for the owner, then for partners (K5, R8)	W5

15.4 Added in this review — verified as of October 2026

Each idea below rests on something that launched or was announced in the last twelve months, and each has a small first step.

#	Idea	What is new (source in the list at the end)	What 3 PIN does	First step and measure
U15	**Metro-line launch programme**	The Poonamallee–Porur–Vadapalani metro opened on 11 Oct 2026 (11 stations; the stations between Porur and Vadapalani, including Valasaravakkam and Karambakkam, are still being finished)	A "station by station" series: walking-distance stock, rents and asks around Porur, Iyyappanthangal, Kattupakkam and Poonamallee, before and after the opening; sourcing targets near the stations still to open	10 station pages and reels in Wave 0–1; leads from the west corridor per month
U16	**Investor co-living units**	Truliv's 728-bed, built-to-suit block on OMR (build–sell–lease–operate); co-living yields quoted up to ~4.5 % against 2.5–3.2 % for ordinary OMR rentals	Sell co-living units to investor buyers and NRIs with the operator's lease; later, a boutique co-living block as a section 14 project	One operator agreement; 5 units placed; yield actually paid
U17	**Senior-living resale and NRI-parent desk**	Ashiana's new 22.7-acre senior-living project at Mahindra World City (₹1,200 cr revenue potential); Columbia Pacific across Chennai	Channel partner for new senior-living launches; a resale and rental desk for existing senior units (an under-served resale market); joins U12	Two channel-partner agreements; first resale closed
U18	**Consent as a product**	DPDP consent managers register from 13 Nov 2026; the main duties start 13 May 2027	Show every client what they agreed to and let them change it in one tap, inside Eåsy; plan a link to a registered consent manager	Consent record on 100 % of leads by May 2027
U19	**Knowledge, not reply speed**	Meta Business Agent gives every Indian business a free WhatsApp AI (Jul 2026)	Choose between TailorTalk and Meta's agent on cost, control and data access only; invest in what the agent *knows* — verified stock, the price desk, matched buyers	A vendor review in Wave 1 (section 25)
U20	**Loan journeys on new rails**	RBI's Unified Lending Interface: 64 lenders and 136 data services by Dec 2025, land records being linked	Ask the DSA partner which lenders use ULI for home loans in Tamil Nadu; route buyers to them first	Days from application to sanction

16. The current system — what is missing, where the gaps are, and what to improve

An honest audit of the live platform (main `b48bfaa`, 14 Oct 2026), so the plan above starts from facts. Each gap says what it costs today and which part of the plan closes it. Items marked **fix now** are small, independent of the waves, and worth doing in the next release.

16.1 Where the platform is already strong

One sign-in and one database across five consoles; every enquiry captured from chat without a duplicate; a real pipeline with milestone dates and an AI that places leads forward-only with undo; one matching engine used in three places; a card for every seller automatically; per-outlet edits and voice-over tracked to a confirmed URL; double-entry books per deal; an append-only change log; a release gate with 41 test suites, page previews and a design audit; lead views that cut a CRM open from 760 reads to 39. Most of the plan is wiring on top of this, not replacement.

16.2 Process gaps against the owner's lifecycle

Owner's step	Today	Gap and cost	Improvement	Closes in
Find on 99acres / WhatsApp / by agent → shortlist	Cards come from seller leads or by hand	No "where found" field or shortlist stage; sourcing is invisible and unmeasured	A *Prospect* column and a `foundVia` field on the card; the sourcing inbox	A3 (Wave 4), A5 (Wave 2); the field **fix now**
Gate: Swami approves before any agreement	Not recorded	"Owner approved" means the property owner approved photos; no record that the agency approved the listing	One-tap approval on the card, logged; agreement drafting waits for it	B5 (Wave 2)
Agreement for Exclusive / Collab before the shoot	Listing type gates nothing	A shoot can be booked without a signed exclusive; disputes later	E-signed agreement; shoot booking for Exclusive/Collab checks it (Normal skips)	B5 (Wave 2)
Documents: non-blocking, **frequent alerts**	Checklist, silent	Missing papers surface only when someone opens the card	Weekly seller nudges and a Daily-task line per card	B6 (Wave 0)
Brochure v1 / v2	Redo + a reminder	Versions unlabelled; nobody knows which brochure a buyer holds	Version stamp on the brochure record and the PDF name	**fix now**
Gate: Swami plans the post before editing	Anyone can plan; editing starts without a plan	Editors cut for outlets nobody decided	"Post plan approved" tick on the card; Start editing warns without it (never blocks a Normal reel)	**fix now** (soft gate)
Final media to Drive	Optional link	Final cuts live on editors' machines	Final link required before "Edit done" for YouTube and Collab; optional for Stories	**fix now**
URL saved against the property	On the Posting row and the dashboard block	Not on the lead; an agent in the CRM cannot see what was posted	Mirror live URLs onto the seller lead's card view	**fix now**

16.3 Missing capabilities, by console

Console	Missing today	Cost	Improvement (plan reference)
CRM	Phone calls are not captured (no cloud number, no recording, no notes from calls)	The main channel in Chennai leaves no record; follow-ups depend on memory	F1, F2 (Wave 1)
CRM	No outbound: no WhatsApp broadcast, no matched-buyer push, no templates beyond confirmations	Every outreach is typed by hand	D3, D4 (Wave 1–3)
CRM	No deal score, no next-best-action; the follow-up queue is date-ordered	Agents work the loudest lead, not the most valuable	F3 (Wave 1)
CRM	No lead attribution to post, ad or portal	Marketing spend cannot be judged	K3 (Wave 0)
CRM	No buyer-facing surface (shortlist, visit pack, documents, offers)	Buyers get WhatsApp messages typed by agents	G1–G3 (Waves 1–5)
CRM	No "do not contact" flag; no consent record per channel	DPDP exposure from May 2027; outbound AI impossible safely	**fix now** (flag), Wave 0 (consent texts)
CRM	Team list, default agent, TailorTalk workspace and the lead-views switch are set by script	Owner depends on an engineer for routine settings	Settings screens — **fix now**
Shoot & Media	No sourcing stage, no likely-to-list, no co-broking intake	Listings depend on inbound chat	A1–A4 (Wave 4); A5 (Wave 2)
Shoot & Media	No price opinion on the card; asking price is typed	Overpriced listings get shot and never sell	B3 price desk (Wave 2)
Shoot & Media	No document reading or verification; no passport	Trust is asserted, not shown	B2, R2, U3 (Wave 4)
Shoot & Media	Media kit is photos/video/drone/floor plan/tour as ticks; no 3D tour, staging, Tamil narration, microsite	Listings look like everyone else's	C1–C5 (Waves 2–3)
Shoot & Media	The Collab outlet has no Posting channel; `postingId` links only series cards to rows	Collab posts tracked by hand; ordinary cards find their row only by code	**fix now**
Posting	No portal syndication; 99acres and the website are ticks, not feeds; no WhatsApp channel	Reach limited to what is posted by hand	D1, D3 (Wave 3)
Posting	No leads-per-post measurement	The weekly plan is made by instinct	E3 (Wave 3)
Property dashboard	No price desk, no demand map, no days-on-market, no flood/resilience page	The inventory is a list, not intelligence	K2, U1 (Waves 2–3)
Property dashboard	Full-page panels' Back button not wired like the CRM and board	Phone Back leaves the page from a panel	**fix now**
Property dashboard	Deleting a property leaves its notes; code patterns differ from the board's	Orphaned notes; some codes never link	**fix now** (shared code module)
Finance	No link from a CRM Won lead or a board card to a deal; deals are typed	Revenue per lead/source cannot be computed	Optional lead link on a deal — **fix now**
Finance	No cash forecast; no recurring-revenue lines; no DSA/referral income tracking	The new lines in section 5 have nowhere to land	Accounts for loans, services, management (Wave 2)

Console	Missing today	Cost	Improvement (plan reference)
Finance	Opening-balances screen probably unreachable; reconciled flag fails silently; month-end re-run errors; bank accounts share one id	Month-end needs overrides; a second bank cannot be reconciled	**fix now** (bank ids, reconciled flag); verify opening balances before the new year
Platform	No enforced roles (everyone can do everything, Finance included); the Finance passcode is in the page code	One mistaken tap can delete money records; no audit of who may do what	Role claims checked by the rules — Wave 0
Platform	No settings screen for several settings; no in-app help; documentation only in this pack	Onboarding a new agent takes a person	Eåsy carries the process (Wave 2); help links **fix now**
Platform	No push notifications; reminders are email and in-app	A follow-up due at 4 pm is missed until the page is opened	WhatsApp reminders through Eåsy (Wave 1)
Platform	No Tamil UI, no Tamil output anywhere	Half the team's and most sellers' first language is absent	C3 language layer (Wave 2)

16.4 Known defects and weaknesses in the live code

From the release-status document and the three independent reviews of the last release.

Area	Defect	Effect	Fix
Shoot & Media	A removed final-video link comes back (the card is saved whole with a merge)	Deleted map keys survive	Delete the key explicitly (`deleteField`) — **fix now**
Shoot & Media	Deleting a card leaves `listingCode` on the lead	The seller still looks linked	Clear it in the delete path — **fix now**
CRM	AI-written visit dates are not sent to Google Calendar	The invitation keeps the old time	Route AI visit changes through the calendar sync — **fix now**
CRM	A deleted TailorTalk lead returns on the next sync; Manage Stages reorder does not persist; Edit → Lost skips the reason; matching ignores TailorTalk's requirement text	Small, daily irritations	Tombstone on delete; persist order; reason dialog on every Lost path; copy a short requirement profile onto the lead (the single highest-return fix for matching)
Lead views	A lead saved while the view layout cannot be confirmed is written without its row (hidden from lists until 09:00); the rules do not check the `_w` stamp; a tenant id that is a prefix of another's would pass the `tt_` guard	Rare; needs a deliberate actor for two of them	`viewsDirty` marker healed by the next page or the rebuild; stamp rule; tenant ids without `_`
Property	Toggles re-save the whole property from the page; a stale tab can overwrite sheet fields without a log entry	Silent data drift	Partial saves for toggles (the map pin already does this) — **fix now**
Finance	The finance settings record, including the Drive folder id the attachments guard trusts, is writable by every team member	A member could point attachments at another folder	Admin-only rule for `driveFolderId` once roles exist
Platform	Brochure delivery and the sheet sync depend on one Mac being on	A switched-off Mac stalls brochures and sync	Run both on a scheduled cloud job with the same credentials
Platform	AI spend is capped only for lead automation; no per-feature budget	A runaway feature can spend the month's budget	One daily budget per feature with a kill switch — Wave 0
Platform	Documents describe removed WhatsApp-bot routes; the privacy policy is a draft	Compliance and clarity	Retire dead routes; publish the policy with the DPDP consent texts — Wave 0

16.5 Data quality and intelligence gaps

Gap	Numbers today	Cost	Improvement
Properties without map coordinates	0 of 131 have pins	No distance, commute or flood-zone answers; the map view is empty	Geocode once from address + locality graph; pin confirmed on the card (Wave 0)
Properties without details text	~60 of 131	Copy, matching and the price desk have nothing to read	Seller intake (B1) and the inventory data-quality agent
Duplicate and mismatched codes	Two code patterns (board vs CRM); duplicates worklist exists	Links missed; two cards for one property possible on re-entry	One shared code module; a duplicate check on create
Signals log written but never read or marked handled	`ttSignalEvents`, interest level, milestone dates, undo history	The richest data the agency owns powers nothing	The fact store (K1) and the self-audit (K4)
No attribution	Leads carry a channel but not the post, ad or portal	Spend decided by instinct	K3
No history of prices and closings as comparables	Price edits are logged; closings are in Finance; neither feeds a price view	No price opinion, no index	K2 price desk
No measured AI accuracy	AI verdicts and human undos are stored; no report	Nobody knows whether the AI helps	K4 weekly accuracy report

16.6 Operations, security, compliance and cost

Gap	Cost	Improvement
Deploys are by hand: rules through a script, the site through a push, lead views through a script; the index exemption needs the Console	Every release depends on one person knowing the order	A release checklist in the repo (exists in the status doc) → a single release script that refuses to skip a step
No continuous integration; tests run on a laptop	A push without tests is possible	Run `npm test` and the previews on every push (GitHub Actions); block merges on failure
No monitoring or alerting for the API routes, cron jobs and quota	A failed 09:00 digest or a quota ceiling is found by a person noticing	The ops sentinel (K4): daily health line to the owner; alert on failures and at 70 % of quota
No backup/restore drill beyond the change log and finance snapshots	Recovery is theoretical	Weekly export of every collection to Drive; a restore test once a quarter
No roles; Finance passcode in the page	Any member can delete or publish anything	Role claims in auth, checked by rules and hidden in the UI — Wave 0
DPDP (duties from May 2027): consent texts, purpose limits, deletion schedules, processor agreements not in place	Outbound AI and recording unlawful without them	Wave 0 compliance pack; a consent field per channel on the lead
WhatsApp templates and the 24-hour window managed by hand	Blocks and failed sends	Template registry in Settings; the assistant checks the window before sending
Firestore free-plan ceiling	Lead views fixed the CRM; the dashboard, board and analytics still read whole collections on open	The fact store and views for properties and cards (K1); upgrade to Blaze with a budget alert before Wave 3
Single points of failure: the brochure Mac, one TailorTalk workspace, one engineer	A holiday stops the pipeline	Cloud jobs for the Mac's work; documented runbooks (this pack); a second person trained on releases

16.7 Experience improvements

Area	Today	Improvement
Phone performance	The board and CRM redraw on every confirmed document; large lists settle slowly (a fix is in progress in the working copy)	Redraw only on data changes (in progress); virtualised lists; skeleton states
Offline and flaky connections	"Still connecting" guard protects data; nothing works offline	Read-only offline mode with queued, visible drafts
Notifications	Email digests and in-app badges	WhatsApp and push reminders from Eåsy, per person, tunable
Finding things	Search per console; no global search or command bar	One command bar (Eåsy) across leads, cards, properties, deals, posts
Help and onboarding	None in the app	"?" on every screen linking to this pack's section; Eåsy answers "how do I..."
Language	English only	Tamil UI strings and Tamil output for every message a seller or buyer receives
Accessibility and consistency	UI v2 audit passes; some older dialogs predate it	Fold the remaining dialogs into the theme; keyboard paths for every dialog

16.8 The improvement list — what to fix first

Ordered by return for effort. **S** days · **M** weeks.

#	Improvement	Effort	Why first	Closes
1	Copy a short TailorTalk requirement profile onto each lead (matching reads it)	S	Highest return per hour: every match improves	16.4
2	Do-not-contact flag and consent fields; DPDP consent texts	S	Everything outbound depends on it	16.3, 16.6
3	Roles in auth and rules; Finance passcode removed from the page	M	Safety; prerequisite for Eåsy's per-role views	16.6
4	Geocode the 131 properties; pin on the card	S	Unlocks map, commute, flood page, demand map	16.5
5	Final-link delete, `listingCode` on delete, AI visit dates to Calendar, Lost reason, stage order	S	Daily irritations, each an hour	16.4
6	Shared property-code module; duplicate check on create	S	Ends the two-pattern problem	16.4, 16.5
7	Optional lead link on a Finance deal; income accounts for loans, services, management	S	Revenue per source; the new lines have a home	16.3
8	Settings screens for team, default agent, workspace, lead-views switch; help links	S	Owner independence	16.3
9	Soft gates: post-plan approved, final link for YouTube/Collab, agency approval tick, brochure version stamp, "where found"	S	The owner's lifecycle, without blocking anyone	16.2
10	Partial saves for property toggles; notes removed with a property	S	Silent drift stopped	16.4
11	Document nudges in Daily task and WhatsApp	S	The owner's "frequent alerts"	16.2
12	Fact store nightly + attribution fields + ops sentinel	M	The base of every wave; a daily health line	16.5, 16.6
13	Dashboard panels' Back button; Collab outlet channel; `postingId` on ordinary cards	S	Navigation and tracking consistency	16.3
14	CI on push; weekly collection export; restore drill	M	Release safety	16.6
15	Cloud jobs for brochure delivery and sheet sync	M	Removes the Mac dependency	16.4
16	Per-feature AI budgets and kill switches; retire dead bot routes	S	Cost control	16.4
17	Tamil strings for every seller- and buyer-facing message	M	Language gap	16.7
18	Finance: bank account ids, reconciled flag, month-end re-run, opening balances check	M	Month-end without overrides	16.3

Items 1–11 and 13 are a two-to-three-week release on their own and should ship before Wave 1; 12 and 14–16 are Wave 0; 17–18 fit Wave 2.

17. Positioning and the name system

The one sentence. *3 PIN Realty is Chennai's verified, evidence-priced agency: every listing checked, priced from data, shown in full and answered within a minute — in Tamil and English.*

Every word of it must be provable, so each claim has a number published every month:

Claim	Proof the client can see	Number we publish
Verified	3 PIN Verified badge with the checks listed (B2)	% of live listings verified
Priced from evidence	Price note with comparables; the Chennai Index (B3, R1)	Sale price as % of the price-note range
Shown in full	Splat tour, floor plan, Monsoon Report, microsite (C1, C5, U1)	% of exclusives with the full kit
Answered within a minute	Eåsy on chat and phone, a person within 60 s in office hours (F1)	Median first response, all channels
In Tamil and English	Every message, reel and note in the client's language (C3)	% of client messages sent in Tamil where preferred

One name system. Every product sits under 3 PIN and says what it does; one assistant, one record, one standard.

Name	What it is	Who sees it	Rule
3 PIN Realty	The agency and masterbrand	Everyone	Every other name appears with it
Eåsy by 3 PIN	The one assistant: team edition inside the consoles; client edition **Ask Eåsy** on WhatsApp, the web and ChatGPT	Team and clients	No second assistant name, anywhere. Every reminder, digest and chat reply speaks as Eåsy
My 3 PIN	The client's space: shortlist, visits, documents, offers, the passport (G3)	Clients	Opened through Eåsy; never a separate app to download
3 PIN Verified	The verification standard and badge (B2)	Buyers, sellers, banks	Shown only when every listed check passes; criteria published
3 PIN Chennai Index	Monthly price and demand data by micro-locality (R1)	Public, press, AI answers	Always with method, sample size and date
Property Passport	The owner's lifetime record of the property (R2, U3)	Owners	Belongs to the owner; transferable at sale
Monsoon Report	Flood-resilience facts per property (U1)	Buyers	Facts with sources, never a single score
Sell-in-30	The exclusive programme with a 30-day promise (R4)	Sellers	Only with its published conditions (section 19)
3 PIN Partners	The broker network on the platform (R6)	Brokers	Partners meet the Verified standard
3 PIN Developments — "Built on demand"	The development chain (section 14)	Landowners, developers, investors	A separate legal entity and accounts

Brand rules. Plain words and numbers first; the owner is the face, with a second trained presenter (section 25); Tamil names for client products approved by the owner; at most one new name a year. "3 PIN Autopilot" (section 4) is the internal name of the operating model and never appears to clients. Before public launch, check and file trademarks for "Eåsy by 3 PIN" and "3 PIN Verified" (real-estate services and software classes) with an advocate.

18. Customers — who they are and what each gets from 3 PIN

Most clients pass through several of these rows in a lifetime — tenant, first-time buyer, landlord, upgrader, seller — which is why the Passport, value reports and management matter more than any single fee (section 20).

Segment	What they need most	What 3 PIN gives	Revenue lines	The Eåsy moment	Measure
First-time buyer (₹50 L–1 Cr: 47 % of Chennai sales)	Certainty: is the title clean, is the price fair, can I get the loan	Verified listings, price note, cost sheet, pre-approval in chat, visit briefs	Buyer side; loan; services	"Can I afford a 2BHK near Porur metro?" answered with stock, EMI and a visit slot	Visit-to-offer; loan attach
Upgrader (above ₹1 Cr: 42 % and rising)	Sell and buy without two moves and a gap	Exclusive sale with Sell-in-30, matched next homes, bridge via an NBFC (U9)	Both sides of two deals; loan	"If I sell at the Index price, what can I buy?"	Deals per upgrader (target 2)
NRI (buyer, seller or landlord)	Trust and presence without flying in	NRI desk: verification, video tours, remote registration (U2), management at the 10 % tier, quarterly reports	Sale fees; management; services	A Sunday video call with the tour, the papers and the next step in one link	NRI clients; NRI managed units
Investor	Yield and liquidity, honestly stated	Rental yield notes (2.5–3.2 % is typical on OMR), co-living units with an operator lease (U16), SM REIT referrals via regulated platforms	Buyer side; management; referral	"What does this flat really yield after maintenance and vacancy?"	Investor repeat purchases
Landlord	A good tenant, rent on time, no calls at night	Tenant matching and verification, UPI AutoPay rent, tickets, inspections	One month's rent per placement; 8 % management	Monthly statement in Tamil or English, with photos	Units managed; days to let; retention
Seller (resale owner)	The best price, quickly, without hassle	Price note, buyers already matched, full media kit, distribution, bidding window	Seller side (1–2 %)	Within 25 minutes of a 9 pm message: checklist done, price note sent, six matched buyers shown	Exclusive share; days on market
Developer and landowner	Pre-sold demand and a fair JV	Demand reports, sole-selling mandates, JV facilitation (section 14)	2–4 % mandates; 1–2 % facilitation; reports	"How many buyers wait for 3BHKs under ₹1.2 Cr within 2 km of this plot?"	Mandates; bookings per launch week
Tenant	A verified home, a fair agreement, a quick move	Verified rentals, digital agreement, deposit terms in writing	Tenant-side placement where charged	A reminder 6 months before the lease ends: "rent again or buy?"	Tenants who later buy through us

The NRI journey, step by step (the most distinct segment): enquiry from abroad at any hour → Eåsy answers in English or Tamil, books a video call in their time zone → verified shortlist with splat tours and Monsoon Reports → offer by e-sign, token by bank transfer with the transaction coordinator → remote or presenceless registration where eligible, power of attorney otherwise, with an advocate from the panel → handover video, then management at the NRI tier → yearly value report and "rent or sell?" prompt. Every step uses something already in the plan; the desk is the packaging (R9).

19. Pricing — the fee card

Market norms in Chennai (2026). Resale brokerage runs 1–2 % of the transaction value, usually charged to each side (some local brokers quote 2 % below ₹1 Cr and 1 % above; national norms fall to 0.5–1 % per side from ₹5 Cr up); rental brokerage is one month's rent; developer channel partners earn 1–2 % and sole-selling mandates 2–4 %; NoBroker's management plans are 8–10 % of rent at standard rates and 5–8 % on offer. GST at 18 % is added to every fee.

The proposed 3 PIN fee card (A — to approve, decision 3 in section 11).

Service	Proposed fee	Market reference	Why this level
Normal listing (open, non-exclusive)	1 % from each side	1–2 % per side	Competitive; no promises attached
Exclusive (90 days)	Seller 1.5 % (2 % below ₹1 Cr), buyer 1 %	1–2 % per side	Pays for what is included: Verified, full media kit, splat tour, Monsoon Report, syndication, price note, bidding window
Sell-in-30 (qualifying exclusives)	Seller 2 %; falls to 1.5 % if not under offer with a token in 30 days	— (no local equivalent found)	A visible promise; economics below
Buyer advisory (we represent only the buyer)	1 %	1–2 %	Shortlist, verification, negotiation, closing
Rental placement	One month's rent from the owner	One month's rent	Market norm; includes tenant verification and the agreement
Management	8 % of rent; **NRI tier 10 %** with quarterly inspection and bill payments	NoBroker 8–10 % standard; 5–8 % on offer	Priced on service, not on being cheapest
3 PIN Verified report (owners outside an exclusive)	₹3,000–5,000 (A)	Advocate opinions vary widely	Included free in every exclusive
Price note	Free to owners (it wins listings); a formal note for banks or NRIs ₹2,000 (A)	—	The best seller lead magnet we have
Development reports	₹2–5 L per report; retainer by agreement	—	Section 14, step 2
Developer mandates; JV facilitation	2–4 % of sales; 1–2 % of land value	As section 14	—
3 PIN Partners	15–20 % of the partner's fee on deals that use our stock or buyers, or a monthly seat fee (A)	—	Pilot with five brokers before fixing
Loan, insurance, service referrals	Paid by the partner, **disclosed to the client, never added to the client's bill**	—	Trust; compliance

Sell-in-30 economics, one ₹1 Cr flat (A). It qualifies only if the asking price sits inside the price-note range, the papers pass Verified, and the seller allows visits on at least five days in the first two weeks. The extra cost to 3 PIN is about **₹25,000** (media kit and splat ₹5,500, staging ₹2,000, boosted reels and ads ₹15,000, extra agent time). Seller fee if under offer in 30 days: ₹2.0 L; if missed: ₹1.5 L; a normal listing earns ₹1.0 L.

Share of Sell-in-30 listings under offer in 30 days	Expected seller fee	Gain over a normal listing, after the ₹25k cost
60 %	₹1.80 L	**+ ₹55,000**
30 %	₹1.65 L	**+ ₹40,000**
0 %	₹1.50 L	+ ₹25,000

Both fees are earned only when the flat sells. So the reduction is affordable even if every listing misses; the real risk is reputational, which is why the conditions are strict and the results are published. "Under offer" means a token paid, not a verbal yes.

Rules. The fee card lives in Settings → Configurations, not in code. No fee below the card without the owner's approval in the queue. Every agreement shows the fee with GST before the shoot (B5).

20. Unit economics — what a lead, a listing, a deal and a client are worth

All figures are assumptions (A) on the section 8 inputs, until Finance and the CRM replace them. They are the numbers an investor asks for first.

Measure	Today (A)	Wave 5, base (A)	How it is computed
Leads per month	70	160	CRM
Ads and portal spend per month	₹45,000	₹60,000	Finance expenses
Ad cost per lead, blended over all leads	₹640	₹375	Spend ÷ leads (organic leads pull it down)
Leads per deal	50	20	1 ÷ conversion
Media spend per month	₹32,000 (8 × ₹4,000)	₹1,00,000 (20 × ₹5,000)	Listings × kit cost
Acquisition cost per deal	**₹55,000**	**₹20,000**	(ads + portals + media) ÷ deals
Brokerage per deal	₹1.2 L	₹1.65 L	Ticket × fee × sides
Acquisition as a share of brokerage	46 %	12 %	—
AI and telephony per deal	near zero	₹3,000–7,500	Run cost ÷ deals

What this says. On today's placeholders the agency spends nearly half of each fee winning the deal, mostly because 49 of every 50 leads do not convert. If Finance confirms anything close to this, conversion (area F) is worth more than any new channel, and Wave 1 is the right first wave. Cost per listing is about ₹8–10,000 (media, verification, about four agent hours); at a 30 % sell-through a listing pays for itself when the seller-side fee on a sale exceeds about ₹33,000 — any listing above about ₹35 L at 1 %. Below that, offer the Normal listing without the full kit.

Client lifetime value — one client who first buys a ₹1 Cr flat through 3 PIN, over ten years (A).

Event	Fee if it happens	Likelihood (A)	Expected value
Buys the flat (buyer side, 1 %)	₹1.00 L	100 %	₹1.00 L
Takes the loan through our partner	₹0.40 L	30 %	₹0.12 L
Takes a service (interiors, movers, legal)	₹0.35 L	40 %	₹0.14 L
Lets it through us (two tenant placements)	₹0.50 L	50 %	₹0.25 L
Has us manage it for five years (₹25k × 8 % × 60 months)	₹1.20 L	30 %	₹0.36 L
Sells through us in years 7–10 at ₹1.3 Cr (seller side 1.5 %)	₹1.95 L	40 %	₹0.78 L
…and we also bring the buyer (1 %)	₹1.30 L	20 %	₹0.26 L
Refers one friend who transacts	₹1.20 L	30 %	₹0.36 L
Total	**₹7.9 L if everything happens**	—	**≈ ₹3.3 L expected**

The expected value is about **three times the first fee**, before discounting and GST; keeping the client costs about ₹500 a year (value report, occasions, the Passport). This is the economic case for sections I, R2 and R9: the first deal pays back its acquisition cost; the relationship is where the margin is.

21. Where to grow first — micro-markets and channels

How the first micro-markets are chosen. From Wave 0, when the 131 properties are geocoded, the demand map scores each micro-market monthly on six inputs: the **demand gap** (matched buyers waiting ÷ our stock), **price momentum** (the Index), **ticket size** (fee per deal), **our footprint** (listings, past clients, leads), **competition** (portal listing density) and a **catalyst** (new metro, road, employer). The top three get the sourcing targets (A5), the content series, the ads and the developer conversations; the list is reviewed every quarter, and one cluster is added per wave.

Starting hypothesis, to be replaced by our own data in Wave 0.

Cluster	Why now (sourced facts)	The play	What we measure
West corridor along the new metro — Porur, Valasaravakkam, Iyyappanthangal, Kattupakkam, Karambakkam, Poonamallee	The Poonamallee–Vadapalani metro opened on 11 Oct 2026, with the Valasaravakkam–Karambakkam stations still to open; CREDAI Chennai names west and south Chennai the 2026 growth corridors; Porur asks around ₹7,400–8,500/sq ft; JV ratios here are documented (section 14)	Station-by-station series (U15); first-time buyers and upgraders; landowner JV outreach	Leads and listings from the corridor; JV conversations
OMR and GST Road — Thoraipakkam, Sholinganallur, Navalur, Perumbakkam; Guduvanchery, Potheri	The largest sales volumes and IT employment; OMR asks ~₹7,000–9,500/sq ft; rents rising and vacancy reported tight; co-living arriving (Truliv at Navalur)	The rental and management line; investors and NRIs; co-living units (U16); the Monsoon Report where flood mapping is high (Sholinganallur, Semmancheri)	Managed units; investor deals; days to let
Core premium resale — Anna Nagar, Adyar/Besant Nagar, Kilpauk, T. Nagar	The highest tickets (₹15,000–22,000/sq ft); homes above ₹1 Cr now 42 % of city sales; resale-heavy, where verification and media matter most; many NRI-owned and NRI-parent homes	Exclusives, Sell-in-30, the Passport, the NRI desk	Exclusive share; average ticket

Start where our stock already clusters; a small agency wins by being the best-known name in three places, not a name in thirty.

Channels — role, cost and target share of leads by Wave 5 (A).

Channel	Role	Cost (A)	Target share	Owner	Measure
Owner-led content (Instagram, YouTube, Tamil series)	Demand and seller trust	Editor time; boosts ₹15–25k/month	20 %	Owner, media lead	Leads per post (E3)
Own site and GEO (Tamil and English; Google AI Mode, ChatGPT)	Organic leads that compound	Built in-house	10 %	Engineering	Organic share
Referrals and past clients (A4, I3, I4)	Cheapest, highest-trust leads	Rewards where lawful	15 %	Eåsy, sales lead	Referral share of deals
Portals (99acres, MagicBricks, Housing.com)	Buyer volume	Subscriptions (A)	25 %	Listings coordinator	Cost per deal by portal; cut the worst
Meta ads (retargeting; seller campaigns)	Fill gaps; launch campaigns	₹300–1,500 per qualified lead	25 % → falling	Owner	Cost per visit, not per lead
Co-broking and partners (A3, R6)	Stock for our buyers	Fee split	5 %	Sales lead	Deals via partners
Developers, NRI associations abroad	Launch stock; NRI clients	Events, webinars	Counted under referrals	Owner	Mandates; NRI clients

Organic (content, site, referrals) is 45 % of leads in this mix, which meets the scorecard's 40 %.

22. People — what Eåsy replaces, who to hire, and how to pay them

The principle. Eåsy takes the typing, chasing, drafting, scheduling and reporting. People keep judgement, trust and presence. Hire only when a wave's exit criteria are met and the measured load says so.

Work	Eåsy does	People do
Lead intake and first answer	Chat and voice 24×7, qualification, booking	The hot-lead call within 60 s in office hours
Follow-up	Drafts, timing, revival on new stock	Relationship calls; judgement on when to stop
Listing onboarding	Intake, document reading, price-note draft, presentation	The pitch, the agreement, the price decision
Media	Rough cuts, copy, captions, the plan draft	The shoot, the final edit, the owner's face and voice
Visits	Booking, brief, reminders, feedback	The visit itself
Closing	Checklist, nudges, cost sheets	Negotiation; the advocate and bank relationships
Management	Rent collection, tickets, statements	Inspections, vendors, tenant issues
Reporting	All of it	The decisions

Hiring plan by wave (A — pay is an assumption to check against Chennai rates).

Wave	Role	Why then	Hire only when	Cost per month (A)
0	A second person trained on releases (existing staff or a contractor, part-time)	Key-person risk on engineering	—	₹0–30k
1	**Lead-desk lead** (inside sales; owns the 60-second promise and voice hand-offs)	Voice agent goes live	The after-hours pilot works for four weeks	₹30–45k
2	**Listings and onboarding coordinator** (agreements, verification, the exclusive pitch pack)	The exclusive drive	Exclusive share ≥ 30 %	₹30–45k
3	Content producer / second editor; a performance-marketing freelancer	Media-kit volume	Editor queue over five days for a month	₹35–50k + ₹20–30k
4	**Transaction coordinator** (supervises H1); one more sales agent	Closings volume	Six or more open deals at once	₹30–45k; agent on base + commission
5	**Property-management operations manager**; one field executive per ~50 units; NRI relationship manager; one more sales agent	The management line	The 20-unit pilot meets its SLAs for a quarter	₹45–65k; ₹20–25k each; ₹40–60k

By Oct 2028 the base case runs with **8 sales agents** (6 today, A) and about **seven support and operations people** added, plus a freelancer; the added people cost is about ₹3–4.5 L a month before the two agents' base pay, against base-case revenue of ₹17.4 L.

Incentives tied to the scorecard (section 9).

- **Sales agents:** today's commission share, plus a bonus per exclusive signed (paid when it sells), a share of the seller-side fee on any listing the agent sourced, and a team pool released only in months when the median first response stays under 60 seconds and no consent rule is broken. Nothing is paid on lead counts or visit counts.
- **Lead desk:** first-response time and visits booked that actually happen.
- **Editors and shooters:** leads per post and on-time delivery, not the number of cuts.
- **Operations:** units retained, rent collected on time, tickets closed within the SLA.
- **Everyone:** a small share of growth in non-brokerage revenue, the line that raises the company's value.

23. Partners — what each side gets

No agreements below exist yet; the names are candidates to approach.

Partner	Candidates	What they get	What 3 PIN gets	Terms to fix	When
Lenders and a DSA	Large banks and housing-finance companies; a DSA aggregator; lenders on the Unified Lending Interface	Pre-qualified buyers with complete papers	0.25–1 % of the disbursed loan (shared if through a DSA); faster sanctions	Disclosure to the buyer; no steering; payout timing	Wave 1 (referral); Wave 4 (in chat)
Insurers via a licensed corporate agent or broker	Home, title and rent-default cover	Customers at registration and lease	Referral income within IRDAI limits	Wait for the final 2026 rules; no bundling with loans	Wave 5
Legal panel (two or three advocates)	Chennai property advocates	Steady title and document work	Fixed-fee opinions behind "needs a lawyer"; agreement templates	Fees, turnaround, conflicts	Wave 0–2
Co-broking and partner brokers	CoClose, Brokers Blok; local brokers	Our buyers for their stock; later the platform (R6)	Stock for our buyers; network fees	Fee split in writing per deal	Wave 4
Developers	Small and mid developers in the chosen clusters	Demand evidence, buyers, media	2–4 % sole-selling	Exclusivity period, marketing budget, data rights	Wave 0–2
Co-living and senior-living operators	Truliv, Stanza; Ashiana, Columbia Pacific	Investor and NRI buyers	Channel fees; management leads	Standard channel-partner agreement	Wave 2–3
Telephony	Exotel, Ozonetel class	Volume	Cloud numbers, recording, a 140-series number for promotions	Recording consent; data location	Wave 1
Voice and language AI	Sarvam (Tamil speech), TailorTalk; Meta Business Agent as the alternative	A reference customer	Tamil voice and chat	DPDP processor agreement; data export and exit clause	Wave 1
E-sign, e-stamp, KYC	Leegality, Digio	Volume	Agreements and KYC in chat	Per-use pricing	Wave 2
Media technology	Splat hosting; virtual staging	Volume	Tours at ₹200–500, staging at ~₹200 an image	Labelling	Wave 2–3
Data	Landeed (documents); registration-data providers	Licence fees	Document reading; comparables	Display rights; no resale of personal data	Wave 2–4
Interiors, movers, cleaning	Large interiors brands; local vendors	Customers at handover	Referral fees (to be agreed; we found no published rates)	Disclosure to the client	Wave 5

Partner rules. Every partner signs a DPDP processor or data-sharing agreement before any client data moves; every referral fee is disclosed to the client; every critical function has a second partner named (section 25).

24. Competitors — their likely moves, and the moats that hold

Competitor	Likely move by 2027	Effect on 3 PIN	Response
NoBroker	More voice AI (ConvoZen), price-led management, the zero-brokerage message pushed harder in Chennai	Pressure on rental fees and on owners who want to sell direct	Compete on verification, media and waiting buyers, not price; management at 8 % with inspections; never a brokerage price war
Portals (99acres, MagicBricks, Housing.com)	AI search and assistants on the portal; AI CRMs sold to brokers (READPRO: 85,000+ licences); higher lead prices; owner-to-buyer chat	Leads cost more; buyers stay on the portal	Syndicate, but own the relationship: microsite links, price notes, Eåsy follow-up; measure cost per deal by portal and cut the worst
Large brokers and channel-partner networks (Square Yards reported over ₹2,000 cr FY26 revenue; Anarock)	Developer mandates at scale with their own AI tools	Competition for mandates	Win on street-level demand evidence and pre-sold buyers in our three clusters
Meta Business Agent and generic AI	Every small broker answers WhatsApp in seconds, free	"We answer in 60 seconds" stops being special	Make the edge the knowledge layer: verified facts, price desk, matched buyers, the Passport
Local agencies copying content	Similar reels and Tamil series	Content alone stops standing out	The Index and the Passport need data they do not have; publish first and on a fixed day every month
Developers selling direct with AI	Direct WhatsApp and AI campaigns for launches	Fewer channel-partner openings	Resale-first business; mandates only where our demand data adds value

The moats, strongest first. (1) Owned transaction and behaviour data at street level — closings, visit feedback, vetoes, price edits — which grows with every deal. (2) The verified process and the Passport: a record clients keep with us. (3) Contracts: exclusives and management agreements that run for months and years. (4) A Tamil-first brand whose public numbers people quote. (5) Network effects once partner brokers share verified stock (R6).

Not moats. The AI tools, reply speed and media formats can all be bought by anyone. They are the price of entry; we use them to feed the five moats above.

Watch list. Once a month Eåsy checks competitors' published fees and plans, portal lead prices and new launches in our three clusters, and puts any change in the owner's Monday report.

25. Risk register

Likelihood (L) and impact (I) are scored 1–5; the score is L × I. Risks scoring 12 or more are reviewed monthly by the owner; the rest quarterly.

#	Risk	L × I = score	Owner	Mitigation	Early warning
1	**DPDP non-compliance** when the duties bind (13 May 2027)	4 × 4 = **16**	Owner, engineering	Wave 0 compliance pack; consent per channel; processor agreements; deletion schedule; breach procedure	Any outbound message without a consent record
2	**Key person — the owner** (the face of the content and every decision)	4 × 4 = **16**	Owner	A second trained presenter; consented voice; approvals delegated by role in Eåsy; decisions recorded in Settings	Posting or approvals stall when the owner is away a week
3	**Key person — one engineer** for releases and the platform	4 × 4 = **16**	Owner	Second person trained; CI; release script; runbooks (this pack)	A release that skips a step
4	**Market slowdown** (Knight Frank counts Q3 2026 sales below Q3 2025; sub-₹50 L sales down 46 %)	3 × 4 = **12**	Owner	Hires gated by wave exits; rental and management income steadier than sales; the downside case roughly covers the plan's costs	Two quarters of falling enquiries in our clusters
5	**AI error sent to a client** (wrong price, fact or document reading)	3 × 4 = **12**	Engineering	Approval on every send; a source on every answer; "needs a lawyer" escalation; weekly accuracy review (K4)	Undo rate above 5 %
6	**Data breach** (phone numbers, KYC, documents)	2 × 5 = **10**	Engineering	Roles in Wave 0; the Finance passcode out of the page; least privilege; encryption; a breach drill; DPDP reporting	Unusual read volumes; failed sign-ins
7	**Development-chain capital loss**	2 × 5 = **10**	Owner	The ladder rules (no construction before two JVs); a project SPV; capped capital; escrow	Pre-sales under 50 % at ground-break
8	**Vendor lock-in or outage** (TailorTalk, Firebase, Vercel's 12-function plan limit, the model vendor)	3 × 3 = **9**	Engineering	Data export; vendor-neutral prompts and tools; a second vendor named per critical function	Price rise; an outage over 4 hours
9	**Platform dependence** (Instagram reach, WhatsApp policy, portal rules)	3 × 3 = **9**	Owner	Own site, newsletter and GEO; a spread of channels (section 21)	Leads per post falling for a month
10	**TRAI or WhatsApp blocks**	3 × 3 = **9**	Lead desk	140-series for promotions; opt-in only; utility templates kept utility	Template quality rating drops
11	**Management service failure** (deposits, repairs, tenant disputes)	3 × 3 = **9**	Operations manager	The 20-unit pilot; SLAs; a vendor panel; written deposit terms	SLA misses; owner complaints
12	**Cash-flow gaps** (lumpy fees while costs rise)	3 × 3 = **9**	Accounts	Six months of fixed costs in reserve before Wave 5 hires; invoice at token	Receivable days rising
13	**Execution overload**	3 × 3 = **9**	Owner	No more than three builds in development; the wave gates	Exit dates slipping
14	**Interest-rate rise or tighter lending**	2 × 4 = **8**	Accounts	Pre-approval early; more weight on rentals	Sanction times; rejection rate
15	**Reputation** (flood claims, staged images, wrong Index numbers)	2 × 4 = **8**	Owner	Monsoon Report facts with sources; staging labels; the Index method published	Complaints; review scores

#	Risk	L × I = score	Owner	Mitigation	Early warning
16	**RERA and advertising rules**	2 × 3 = **6**	Owner	Agent registration current; facts from the record; labels	A notice or complaint
17	**Insurance-referral rules change** (IRDAI's 2026 consultation)	3 × 2 = **6**	Accounts	Model insurance income at zero until final	Final rules published

26. The 90-day plan — from today to Wave 1

From Monday 19 October 2026 to Sunday 17 January 2027. Owners are roles; the owner (Swami) names a person against each in the first week.

Week	Dates	Item	Owner	Done when
1	19–25 Oct	Set the nine model inputs from Finance; confirm the TNRERA agent registration; approve the name system and the Eåsy wordmark	Owner, accounts	Section 8's "Today" column replaced; registration on file
1–3	19 Oct–8 Nov	The fix-now release (16.8 items 1–11 and 13)	Engineering	Released through the gate
2	26 Oct–1 Nov	Geocode the 131 properties and tag each with its micro-market	Engineering, inventory maintainer	131 pins confirmed on cards
2–4	26 Oct–15 Nov	DPDP consent texts, do-not-contact flag, final privacy policy (advocate review)	Owner, engineering	Texts live in the intake
3	2–8 Nov	Telephony and Tamil voice: shortlist two of each; test with real Tamil calls	Sales lead	Scorecard for each vendor
3–5	2–22 Nov	Fee card and exclusive agreement (section 19) with the advocate	Owner	Template approved
4	9–15 Nov	Choose the first three micro-markets from the geocoded stock and leads (section 21)	Owner	Three clusters named
4–8	9 Nov–13 Dec	Roles in sign-in and rules; the Finance passcode removed from the page	Engineering	Rules deployed; tests pass
4–6	9–29 Nov	Attribution fields; "where did you see us?" in the TailorTalk intake	Engineering	90 % of new leads attributed
5	16–22 Nov	Incentive plan for Wave 1 (section 22)	Owner	Shared with the team
5–9	16 Nov–20 Dec	Nightly fact store, ops sentinel, CI on push, weekly export	Engineering	The daily health line arrives
6	23–29 Nov	DSA partner on a referral basis; legal panel of two advocates	Accounts	Agreements signed
6–7	23 Nov–6 Dec	West-corridor metro series (U15): five reels and station pages	Media lead	Posted; leads tracked
7	30 Nov–6 Dec	First three developer conversations with demand data (section 14)	Owner	Meetings held; notes in the CRM
8	7–13 Dec	Telephony contract; cloud number; recording-consent script	Sales lead	Numbers live in test
8–10	7–27 Dec	Chennai Index draft for 10 localities (internal first)	Owner, engineering	Pages reviewed
9–11	14 Dec–3 Jan	Voice agent pilot after hours only; calls → notes with two agents	Sales lead, engineering	50 calls handled; notes accepted
10	21–27 Dec	Lead-desk lead: offer made if the pilot works	Owner	Offer accepted
11	28 Dec–3 Jan	Wave 0 exit check: fact store fresh daily; 90 % attribution	Owner	Criteria met, or the reason recorded
12	4–10 Jan	First three exclusives signed on the new fee card	Sales lead	Agreements e-signed
13	11–17 Jan	Wave 1 starts: voice agent in office hours, deal score, approval queue; the first Monday report	Engineering, owner	Wave 1 live

27. Funding — what each wave costs and how to pay for it

What each wave adds (A). Engineering stays in-house at today's cost and is not counted; people are from section 22.

Wave	One-off cost (A)	Run cost added by the wave's end (A, per month)	Funded by
0 · Facts	₹1–2 L (advocate review of consent texts and agreements, database plan upgrade, CI)	₹10–20k	Operating cash
1 · Answer and act	₹1–2 L (telephony and voice set-up)	₹55–85k (voice, telephony and AI ₹25–40k; lead-desk lead)	Operating cash; one extra deal a month covers it
2 · Seller autopilot	₹1–3 L (e-sign, templates, price data)	₹45–70k (coordinator; e-sign and data)	Operating cash
3 · Showcase and distribute	₹2–3 L (360 camera and capture kit, site)	₹70k–1.1 L (content producer, freelancer, splat hosting, portal plans)	Operating cash
4 · Source and close	₹1–2 L (registration data, legal)	₹50–80k (transaction coordinator; one agent's base)	Operating cash
5 · Recur and scale	₹2–4 L (management set-up, vendor panel)	₹1.5–2.5 L (operations manager, field executives, NRI manager, one agent's base)	Operating cash, or partner capital if the gates below are met

Over 24 months the plan needs about **₹55–90 L of cash** (A): ₹8–16 L one-off, the rest run costs that ramp with the waves. In the base case the extra revenue over the same 24 months is about ₹1.7 Cr, so the plan pays for itself; in the downside case it is about ₹75 L — roughly break-even, which is why every hire waits for its gate.

Self-funded vs raised.

- **The platform and the brokerage (Waves 0–3): self-funded.** Costs ramp with revenue; outside equity is expensive at today's revenue; the owner keeps control.
- **Review outside capital at the Wave 3 exit (Sep 2027)**, and only if for two quarters running: lead → deal ≥ 4 %, exclusive share ≥ 40 %, organic share ≥ 40 %, acquisition cost per deal ≤ ₹30,000 and monthly revenue ≥ ₹6 L. Capital would then speed up the management line, the NRI desk and the partner network (R6). The preferred form is a strategic partner (a lender or a developer) or revenue-based finance for working capital, before any equity round.
- **The development chain: never on the brokerage's balance sheet beyond a fixed cap.** One SPV per project; the landowner brings the land (JV), the construction partner funds the build, investors take project equity; 3 PIN brings the mandate, the demand data and the sales, for a promoted share. Gates: two JVs facilitated, a construction partner with a delivered record, and a pre-sales list for at least half the units.
- **The instant-offer bridge (R5):** investors' money in their own vehicle; 3 PIN earns fees and holds no stock.

What an investor or partner will ask to see — and what the platform can already produce: the nine inputs from Finance; twelve months of leads by source through to deals (K3); the unit economics in section 20 on real numbers; managed-unit retention; and the multi-tenant platform that R6 and L4 would sell.
