3PIN REALTY · AI & AUTOMATION ROADMAP

Stop updating the system. Let the system update itself.

Four AI workflows close the gaps against the best proptech platforms of 2026 and give every hour of typing, chasing and checking back to the people who meet clients.

~~Type notes after every call~~	→	Calls write their own notes
~~Fill a form to book a visit~~	→	Say it once; it is booked
~~Phone sellers for papers~~	→	WhatsApp chases, you approve
~~Read four consoles for status~~	→	One AI report every Monday

FLAGSHIP 1 · NOBODY SHIPS THIS FULL CHAIN YET

One sentence books the whole site visit

The agent speaks or types a command. The assistant finds the client and the property, picks a free agent, confirms with the client on WhatsApp, reminds the agent and adds a task.

> “Schedule the site visit for client Shiva at Anne property, 2 pm tomorrow.”

TODAY **By hand**

1. Search and open Shiva's lead
2. Open the site-visit scheduler
3. Pick the day and time
4. Check who is free on Google Calendar
5. Choose the agent and save
6. Find the property's map link
7. WhatsApp Shiva the time, location and contact
8. Remember to remind the agent

8 manual steps across 3 apps

WITH AI **One command, one tap**

Hears the command
Tamil or English, voice or text

Finds Shiva and “Anne”
Lead by name and phone; property by name, code or reference

Picks a free agent
Property agent first, then lead agent, then whoever is free at 2 pm

One-tap confirm · a person decides
Preview of booking and message

Confirms to Shiva
WhatsApp: time, map pin, agent's name and number

Reminds and assigns
Agent task + reminder 2 h before; client reminder that morning

Example · WhatsApp from 3 PIN Realty

Hi Shiva, your site visit to **Anne** is confirmed for **tomorrow, 2:00 pm**.

📍 Location: maps pin
👤 Pradeep · 98xxx xxx21

Thanks, see you there 👍

Tomorrow 9:00 am

Reminder: Anne at 2:00 pm today. Reply 1 to reschedule.

1 command + **1** tap — the rest happens by itself

FLAGSHIP 2 · STANDARD AT FOLLOW UP BOSS, CINC, SELL.DO

Every call updates the lead by itself

Calls go through a business number, are recorded with consent and transcribed in Tamil and English. The lead AI that already reads chats reads the call too.

TODAY **After every call**

1. Open the lead
2. Type what was said
3. Decide the next follow-up
4. Update interest and stage
5. Book the visit if agreed

5 steps × every call, every agent, every day — and skipped when busy

WITH AI **Hang up; it is done**

- **Call recorded with consent**
  Exotel / Ozonetel number mapped to the agent
- **Transcribed**
  Tamil + English speech-to-text
- **Read by the lead AI**
  Summary, objections, properties discussed
- **Next follow-up set**
  Inside working hours; interest hot / warm / cold
- **Visit and stage updated**
  Forward only, undo for 7 days
- **Agent glances, keeps or edits · a person decides**

“📞 Call summary” in the Timeline

After a visit, a **30-second voice note** becomes feedback, a follow-up and a second-visit proposal.

FLAGSHIP 3 · NO VENDOR DOES THIS WELL — 3 PIN CAN LEAD

Seller autopilot: from “I want to sell” to matched buyers

The system collects, verifies, asks for approval, books the shoot, chases what is missing, lists the property and messages the buyers who fit. People step in only for decisions.

TODAY **The agent does it all**

1. Call the owner for details, often several times
2. Ask for papers, follow up for days
3. Get Swami's approval in conversation
4. Find a shoot slot that suits everyone
5. Request the brochure
6. Post on 99acres and the website by hand
7. Work out which buyers to call

7 hand-offs; cards wait in “Details & docs”

WITH AI **The system runs it; people decide**

WhatsApp intake
Asks only for what is missing against the 30-field checklist

Documents read and checked
Patta reference / QR, EC, owner ID; mismatches flagged

Swami approves in one tap · a person decides
Summary, price vs nearby, risk flags

✍️ **Agreement e-signed**
Exclusive / Collab, Aadhaar eSign

📸 **Shoot booked by rule**
Owner picks one of two offered slots

🌐 **Listed and announced**
Website automatically; 99acres via feed; brochure to matched buyers

It also adds the two **owner gates** the app lacks today: approval and agreement.

FLAGSHIP 4 · THE COMPASS "DAILY BRIEFING" PATTERN

Briefings and the weekly report write themselves

Today's digests list facts by rule. An AI that reads the week says what it means and what to do.

TODAY **09:00 digest**

- Overdue: 14 leads
- Today: 9 follow-ups
- Tomorrow: 6 follow-ups

A list; the reader works out the meaning

WITH AI **Monday report to CEO and COO**

Visits held vs planned
No-shows, agents who declined, visits never booked

Feedback themes per property
"Anne: price objection in most visits — review pricing"

Media pipeline
Shoots done, edits late, posts without URLs

What to change this week
Three actions, each with the evidence behind it

Agents get their own **08:30 brief**: who to call first and why.

THE NEXT LAYER · 27 ADVANCED IDEAS

Own the data the portals do not have, and let supervised agents act on it

Generic AI features will be commodities within about two years. The lasting edge is proprietary data (closed prices, unmet demand, verified documents, call outcomes) with AI agents that execute while a person approves. Every idea below builds on data or code 3 PIN already has.

Data only 3 PIN holds

Every buyer's requirement · Unmet-demand signals · Price-change history · Visit feedback · Call outcomes

↓

Supervised AI agents

Score · Match · Draft · Remind · Forecast

↓

People decide

Approve · Price · Negotiate · Meet clients

A Intelligence foundation

1 Nightly fact store

Months · High impact

Compresses leads, milestones, signals, edits, posts and the ledger nightly, so every analysis costs about 30 reads.

2 3 PIN MCP server

Months · High impact

Ask Claude or ChatGPT about live data: “which Anna Nagar buyers above ₹2 Cr went quiet after a visit?”

B Sales intelligence

5 Deal score and next action

Months · High impact

A transparent score with a one-line why; advisory only, never moves a stage.

6 Going-cold warning

Weeks · Medium impact

Flags a lead before it goes silent and drafts one nudge for approval.

3 Supervised AI back office

Quarters · High impact

Five agents (inside sales, listing, transaction, media, finance clerk) on one queue; a person approves each action.

4 Self-audit and ops sentinel

Weeks · Medium impact

Measures AI accuracy weekly; watches syncs, queues and the Mac pipeline and repairs the safe cases.

7 Parked-buyer revival

Weeks · High impact

New stock or a price drop matches a lost or held buyer, with a ready message.

8 Pre-visit negotiation brief

Weeks · High impact

Must-haves, objections with quotes, the seller's floor, comparables, three questions to ask.

9 Objection library

Weeks · Medium impact

“Anne: parking raised in 4 of 6 visits”, and the replies that worked.

10 “Likely to move” engine

Months · High impact

Lease ends, rent escalations, past buyers' life events: signals 3 PIN owns.

11 Coaching flywheel

Months · Medium impact

Calls and chats scored against 3 PIN's own playbook; Tamil role-play.

C Inventory, pricing and trust

12 Demand–supply gap engine

Months · High impact

“Many buyers want 3 BHK Anna Nagar, we hold 2”: who to source and what to shoot first. No product does this.

13 Chennai price desk

Months · High impact

A fair-price band with evidence: guideline value floor, own comparables, buyer price ceilings.

14 Data-quality agent

Months · Medium impact

Proposes missing fields from details and chats; drafts the exact sheet edits.

15 “3 PIN Verified” badge

Months · High impact

Owner KYC, patta QR, 30-year EC, RERA and forgery checks: trust as a brand.

D Media and marketing

16 Tamil-first language layer

Weeks · High impact

Indic speech (Tamil error about 25% vs Whisper's 49%); Tamil V/O at about ₹30 per 10k characters.

17 Copy and script generator

Weeks · Medium impact

Portal copy, captions, reel and V/O scripts in Tamil and English, facts only.

18 ₹-per-home 3D tour

Months · Medium impact

Gaussian-splat tour from the shoot video, phone-scan floor plan, labelled AI hero shots.

19 Post → lead attribution

Months · Medium impact

Leads per post, channel and hour; suggests the best slots.

20 Editor capacity forecast

Weeks · Medium impact

Predicts each edit's finish date and flags overload.

E Commerce, finance and new revenue

21 WhatsApp-native commerce

Months · High impact

Flows for requirements and slots, listing carousels, fee payments, ads optimised for visits.

22 AI transaction coordinator

Months · High impact

Token → agreement → loan → stamp duty → registration → patta, with deadlines for everyone.

23 Cash forecast and ledger watch

Weeks · Medium impact

Probability-weighted brokerage; duplicate bills and GST risks flagged.

24 PMLA / KYC autopilot

Weeks · High impact

Required for agents above ₹20 lakh turnover: KYC, records and flags in the ledger.

25 Embedded services

Months · High impact

Home-loan referrals, legal, interiors, movers; commission tracked in the books.

26 Rental management

Quarters · High impact

UPI AutoPay or e-NACH rent, tenant verification, maintenance: recurring revenue.

27 “Ask 3 PIN” search

Months · Medium impact

Conversational search that books visits and is cited by ChatGPT and Gemini.

Scale check: about 519 leads and 131 properties are too few to train models, so every score is transparent, shows its evidence and is recalibrated each quarter.

IMPACT × EFFORT

Four quick wins first; twelve big bets carry the decade

Quick wins: do first

- Fix the 10 blockers in today's code
- 7 Parked-buyer revival
- 8 Pre-visit negotiation brief
- 16 Tamil-first language layer
- 24 PMLA / KYC autopilot

Big bets: plan and fund

- 1 Fact store · 2 MCP server · 3 AI back office
- 5 Deal score · 10 Likely to move · 12 Gap engine
- 13 Price desk · 15 Verified badge
- 21 WhatsApp commerce · 22 Transaction coordinator
- 25 Embedded services · 26 Rental management

Fill-ins: slot in between

- 4 Self-audit and ops sentinel
- 6 Going-cold warning · 9 Objection library
- 17 Copy and scripts · 20 Editor forecast
- 23 Cash forecast, ledger watch

Later: after the foundation

- 11 Coaching flywheel · 14 Data-quality agent
- 18 3D tours · 19 Post attribution
- 27 “Ask 3 PIN” search

Top row: high impact · bottom row: medium impact

Left: weeks of work · right: months

HUMAN TOUCH

The system types, chases, checks and messages. People decide and meet clients.

Realtor

AI TAKES OVER

Call notes, visit forms, confirmations, reminders, chasing sellers

YOU FOCUS ON

More site visits, negotiation, relationship calls

Admin

AI TAKES OVER

Missing data, copying details to portals, asking owners for papers

YOU FOCUS ON

Owner relationships and quality checks

Videographer / editor

AI TAKES OVER

Collecting shoot details, first-cut reels, posting and pasting URLs

YOU FOCUS ON

Better shoots and edits, more properties a week

CEO

AI TAKES OVER

Approvals by conversation, reading digests

YOU FOCUS ON

One-tap approvals, pricing, partnerships, key clients

COO

AI TAKES OVER

Chasing status across four consoles

YOU FOCUS ON

Fixing the bottlenecks the weekly report surfaces

AGAINST THE BEST OF 2026

Where 3 PIN stands today

Capability	3 PIN today	Best in class	Position
AI pipeline placement with human override	Forward-only moves, suggestions, 7-day undo	Few products move stages at all	Ahead
Shoot → edit → V/O → post tracking	Per-outlet cuts, gates, URL saved	Aryeo booking only	Ahead
Chat intake and AI qualification	TailorTalk + lead AI	Ylopo, Lofty, Sell.Do	On par
Buyer ↔ property matching	One engine in three consoles	BoldTrail, Zillow Pro (behaviour signals)	On par
Call recording → notes → next step	Not built	Sell.Do, Follow Up Boss, CINC	Gap
Voice / text command assistant	Not built	Rechat “Hey Lucy”, Lofty, Compass	Gap
AI voice agent for new leads	Not built	Sell.Do Jarvis (Tamil), Ylopo	Gap
Portal syndication	By hand, URL recorded	Sell.Do two-way portal sync	Gap
Chasing sellers for missing details	Staff worklist only	No vendor does it well	Chance to lead

Sources: vendor pages opened in October 2026 — listed in the roadmap doc.

PROPOSED PLAN · TARGETS, NOT COMMITMENTS

Five phases, each useful the week it lands

1

Foundations

Nov–Dec 2026

- Fix the blockers
- Fact store, roles
- Calls → notes
- WhatsApp templates
- PMLA / KYC, ops sentinel

Data you can trust

2

Assistant

Jan–Feb 2027

- Voice / text commands
- Visit confirmations
- Morning brief, weekly report
- Pre-visit brief
- Revive lost buyers, Tamil layer

Say it; it is booked

3

Seller autopilot

Mar–May 2027

- WhatsApp seller intake
- Documents, approval, e-sign
- Shoot booked by rule
- Gap engine, price desk
- Verified badge

Sellers fill listings

4

Growth engine

Jun–Sep 2027

- AI calls new leads
- Buyer outreach
- Reels, API posting, 99acres
- Deal score, attribution
- MCP server

Buyers found for you

5

New revenue

Oct 2027–Mar 2028

- AI back office
- Transaction coordinator
- Embedded services
- Rental management
- WhatsApp commerce, Ask 3 PIN

New revenue lines

Guardrails throughout: consent on recorded calls (DPDP duties apply from 13 May 2027), WhatsApp templates outside the 24-hour window, no cold AI calls (TRAI), and a person approves Won, listings, agreements and prices.

3Pin Realty · AI & automation roadmap · 13 Oct 2026
